Applied Longitudinal Data Analysis: Modeling Change and Event Occurrence Judith D. Singer, John B.

Willett, 2003-03-19 Change is constant in everyday life Infants crawl and then walk children learn to read and write teenagers mature in myriad ways the elderly become frail and forgetful Beyond these natural processes and events external forces and interventions instigate and disrupt change test scores may rise after a coaching course drug abusers may remain abstinent after residential treatment By charting changes over time and investigating whether and when events occur researchers reveal the temporal rhythms of our lives *Applied Longitudinal Data Analysis* is a much needed professional book for empirical researchers and graduate students in the behavioral social and biomedical sciences It offers the first accessible in depth presentation of two of today's most popular statistical methods multilevel models for individual change and hazard survival models for event occurrence in both discrete and continuous time Using clear concise prose and real data sets from published studies the authors take you step by step through complete analyses from simple exploratory displays that reveal underlying patterns through sophisticated specifications of complex statistical models *Applied Longitudinal Data Analysis* offers readers a private consultation session with internationally recognized experts and represents a unique contribution to the literature on quantitative empirical methods Visit <http://www.ats.ucla.edu/stat/examples/alda/htm> for DT Downloadable data sets DT Library of computer programs in SAS SPSS Stata HLM MLwiN and more DT Additional material for data analysis **The SAGE Handbook of Quantitative Methods in Psychology** Roger E Millsap, Alberto

Maydeu-Olivares, 2009-08-05 I often wonder to myself whether the field needs another book handbook or encyclopedia on this topic In this case I think that the answer is truly yes The handbook is well focused on important issues in the field and the chapters are written by recognized authorities in their fields The book should appeal to anyone who wants an understanding of important topics that frequently go uncovered in graduate education in psychology David C Howell Professor Emeritus University of Vermont Quantitative psychology is arguably one of the oldest disciplines within the field of psychology and nearly all psychologists are exposed to quantitative psychology in some form While textbooks in statistics research methods and psychological measurement exist none offer a unified treatment of quantitative psychology The SAGE Handbook of Quantitative Methods in Psychology does just that Each chapter covers a methodological topic with equal attention paid to established theory and the challenges facing methodologists as they address new research questions using that particular methodology The reader will come away from each chapter with a greater understanding of the methodology being addressed as well as an understanding of the directions for future developments within that methodological area

Drawing on a global scholarship the Handbook is divided into seven parts Part One Design and Inference addresses issues in the inference of causal relations from experimental and non experimental research along with the design of true experiments and quasi experiments and the problem of missing data due to various influences such as attrition or non compliance Part Two Measurement Theory begins with a chapter on classical test theory followed by the common factor analysis model as a model for psychological measurement The models for continuous latent variables in item response theory are covered next followed by a chapter on discrete latent variable models as represented in latent class analysis Part Three Scaling Methods covers metric and non metric scaling methods as developed in multidimensional scaling followed by consideration of the scaling of discrete measures as found in dual scaling and correspondence analysis Models for preference data such as those found in random utility theory are covered next Part Four Data Analysis includes chapters on regression models categorical data analysis multilevel or hierarchical models resampling methods robust data analysis meta analysis Bayesian data analysis and cluster analysis Part Five Structural Equation Models addresses topics in general structural equation modeling nonlinear structural equation models mixture models and multilevel structural equation models Part Six Longitudinal Models covers the analysis of longitudinal data via mixed modeling time series analysis and event history analysis Part Seven Specialized Models covers specific topics including the analysis of neuro imaging data and functional data analysis *Applied Linear Regression for Longitudinal Data* Frans E.S. Tan, Shahab Jolani, 2022-12-09 This book introduces best practices in longitudinal data analysis at intermediate level with a minimum number of formulas without sacrificing depths It meets the need to understand statistical concepts of longitudinal data analysis by visualizing important techniques instead of using abstract mathematical formulas Different solutions such as multiple imputation are explained conceptually and consequences of missing observations are clarified using visualization techniques Key features include the following Provides datasets and examples online Gives state of the art methods of dealing with missing observations in a non technical way with a special focus on sensitivity analysis Conceptualises the analysis of comparative experimental and observational studies It is the ideal companion for researchers and students in epidemiological health and social and behavioral sciences working with longitudinal studies without a mathematical background

Applied Data Analytic Techniques For Turning Points Research Patricia Cohen, 2012-10-12 This innovative volume demonstrates the use of a range of statistical approaches that examine turning points a change in direction magnitude or meaning in real data Analytic techniques are illustrated with real longitudinal data from a variety of fields As such the book will appeal to a variety of researchers including Developmental researchers interested in identifying factors precipitating turning points at various life stages Medical or substance abuse researchers looking for turning points in disease or recovery Social researchers interested in estimating the effects of life experiences on subsequent behavioral changes Interpersonal behavior researchers looking to identify turning points in relationships Brain researchers needing to discriminate the onset of an experimentally produced process in a participant The

book opens with the goals and theoretical considerations in defining turning points An overview of the methods presented in subsequent chapters is then provided Chapter goals include discriminating local from long term effects identifying variables altering the connection between trajectories at different life stages locating non normative turning points coping with practical distributional problems in trajectory analyses and changes in the meaning and connections between variables in the transition to adulthood From an applied perspective the book explores such topics as antisocial aggressive trajectories at different life stages the impact of imprisonment on criminal behavior family contact trajectories in the transition to adulthood sustained effects of substance abuse alternative models of bereavement and identifying brain changes associated with the onset of a new brain process Ideal for advanced students and researchers interested in identifying significant change in data in a variety of fields including psychology medicine education political science criminology and sociology **New**
