Comprised of 10 chapters, this book begins with exercises related to set theory and concepts such as the union and intersection of sets. Exercises on Cartesian coordinate systems and graphs, as well as linear programming from a geometric and algebraic point of view, are then given. Subsequent chapters deal with matrices, the solution of linear systems, and applications, the simplex method for solving linear programming problems, and probability and probability models for finite sample spaces, as well as permutations, combinations, and counting methods. Basic concepts in statistics are also considered.
