Joan Holt, 2017-03-06 The global trade of aquatic organisms for home and public aquariums along with associated equipment and accessories has become a multi billion dollar industry. Aquaculture of marine ornamental species still in its infancy is recognized as a viable alternative to wild collection as it can supplement or replace the supply of wild caught specimens and potentially help recover natural populations through restocking. This book collects into a single work the most up to date information currently available on the aquaculture of marine ornamental species. It includes the contributions of more than 50 leading scientists and experts on different topics relevant for the aquaculture of the most emblematic groups of organisms traded for reef aquariums. From clownfish to angelfish, tangs and seahorses as well as corals, anemones, shrimps, giant clams and several other reef organisms, all issues related with the husbandry, breeding and trade are addressed with explanatory schemes and illustrations being used to help in understanding the most complex topics addressed. *Marine Ornamental Species Aquaculture* is a key reference for scientists and academics in research institutes and universities, public and private aquaria as well as for hobbyists.
