A Psychology Of Food More Than A Matter Of Taste:

A Psychology of Food B. Lyman, 2012-12-06 Writing this book has been a pleasure but it has also been frustrating It was a delight to see that the facts of food preferences eating and food behavior conform in many ways to the general principles of psychology Matching these however was often like putting together a jigsaw puzzle looking at a fact and trying to figure out which psychological theories or principles were relevant This was made more difficult by conflicting principles in psychology and contradictory findings in psychological as well as food preference research The material cited is not meant to be exhaustive Undoubtedly I have been influenced by my own research interests and points of view When conflicting data exist I selected those that seemed to me most representative or relevant and I have done so without consistently pointing out contrary findings This applies also to the discussion of psychological principles Much psychological research is done in very restrictive conditions Therefore it has limited applicability beyond the confines of the context in which it was conducted What holds true of novelty complexity and curiosity when two dimensional line drawings are studied for example may not have much to do with novelty complexity and curiosity in relation to foods which vary in many ways such as shape color taste texture and odor Nevertheless I have tried to suggest relationships between psychological principles and food preferences
