Computational Science, Vol. 1 Masaaki Geshi, 2019-05-14 This book provides basic and practical techniques of parallel computing and related methods of numerical analysis for researchers who conduct numerical calculation and simulation Although the techniques provided in this book are field independent these methods can be used in fields such as physics chemistry biology earth sciences space science meteorology disaster prevention and manufacturing In particular those who develop software code in these areas will find this book useful The contents are suitable for graduate students and researchers in computational science rather than novices at programming or informed experts in computer science Starting

with an introduction to the recent trends in computer architecture and parallel processing Chapter 1 explains the basic knowledge of speedup programs with simple examples of numerical computing Chapters 2 4 detail the basics of parallel programming the message passing interface MPI and OpenMP and discuss hybrid parallelization techniques Showing an actual example of adaptation Chapter 5 gives an overview of performance tuning and communication optimizations To deal with dense matrix calculations Chapter 6 details the basics and practice of linear algebra calculation libraries BLAS and LAPACK including some examples that can be easily reproduced by readers using free software Focusing on sparse matrix calculations Chapter 7 explains high performance algorithms for numerical linear algebra Chapter 8 introduces the fast Fourier transform in large scale systems from the basics Chapter 9 explains optimization and related topics such as debug methods and version control systems Chapter 10 discusses techniques for increasing computation accuracy as an essential topic in numerical calculation This is the first of the two volumes that grew out of a series of lectures in the K computer project in Japan The second volume will focus on advanced techniques and examples of applications in materials science

Frontiers in Computational Chemistry: Volume 7 Zaheer Ul-Haq,Angela K. Wilson,2024-11-20 Frontiers in Computational Chemistry Volume 7 offers a comprehensive overview of the latest advances in molecular modeling techniques for drug discovery and development This book focuses on key computational approaches such as rational drug design adsorption studies quantum mechanical calculations and molecular interactions in drug development It provides insights into lead generation optimization and the creation of novel chemical entities targeting various biological mechanisms including inflammation The chapters explore modern computational tools and their applications particularly in low and middle income countries LMICs The book is essential for researchers academics and professionals in computational chemistry molecular modeling and pharmaceutical sciences Students and researchers

Progress in Computational Physics of Matter Luciano Reatto,Franca Manghi,1995 The aim of the book is to describe some of the recent advances through computer simulation in a broad sense in the understanding of the complex processes occurring in solids and liquids The rapid growth of computer power including the new parallel processors has stimulated a ferment of new theoretical and computational ideas which have been developed in particular by the authors in a pluriennial research project supported by Consiglio Nazionale delle Ricerche CNR for the development of novel software for large scale computations The book will cover advances in ab initio Car Parrinello molecular dynamics quantum monte carlo simulations self consistent density functional computation of electronic states classical molecular dynamics simulation of thermodynamic processes chemical reactions and transport properties Besides the description of the results of these techniques in leading edge applications the book will address specific aspects of the algorithms and software which have been developed by the authors in order to implement in an efficient way the new theoretical advances in these computationally intensive problems These aspects which are generally not discussed in any detail in the literature can be of great help for newcomers in the field

The Art of High

Performance Computing for Computational Science, Vol. 2 Masaaki Geshi, 2019-10-01 This book presents advanced and practical techniques for performance optimization for highly parallel processing. Featuring various parallelization techniques in material science, it is a valuable resource for anyone developing software codes for computational sciences such as physics, chemistry, biology, earth sciences, space science, weather, disaster prevention, and manufacturing, as well as for anyone using those software codes. Chapter 1 outlines supercomputers and includes a brief explanation of the history of hardware. Chapter 2 presents procedures for performance evaluation, while Chapter 3 describes the set of tuned applications in materials science, nanoscience, and nanotechnology. Chapter 4 introduces the order N method based on density functional theory (DFT) calculation. Chapter 5 explains how to extend the applicability of DFT to large scale systems by reducing the computational complexity. Chapter 6 discusses acceleration and parallelization in classical molecular dynamics simulations, and lastly Chapter 7 explains techniques for large scale quantum chemical calculations including the order N method. This is the second of the two volumes that grew out of a series of lectures in the K computer project in Japan. The first volume addresses more basic techniques, and this second volume focuses on advanced and concrete techniques.

Innovations and Advanced Techniques in Computer and Information Sciences and Engineering Tarek Sobh, 2007-09-04 Innovations and Advanced Techniques in Computer and Information Sciences and Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science, Computer Engineering, and Information Sciences. Innovations and Advanced Techniques in Computer and Information Sciences and Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering (SCSS 2006) which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering (CISSE 2006). All aspects of the conference were managed on line, not only the reviewing, submissions, and registration processes, but also the actual conference. Conference participants, authors, presenters, and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference. The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions, live without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 70 countries, for whose researchers this opportunity presented a much more affordable, dynamic, and well planned event to attend and submit their work to, versus a classic on the ground conference. The CISSE conference audio room provided superb audio, even over low speed internet connections, the ability to display PowerPoint presentations, and cross platform compatibility; the conferencing software runs on Windows, Mac, and any other operating system that supports Java. In addition, the conferencing system allowed for an unlimited number of participants, which in turn granted CISSE the opportunity to allow all participants to

attend all presentations as opposed to limiting the number of available seats for each session Advances in Computer Science, Engineering and Applications David C. Wyld, Jan Zizka, Dhinaharan Nagamalai, 2012-05-17 The International conference series on Computer Science Engineering Applications ICCSEA aims to bring together researchers and practitioners from academia and industry to focus on understanding computer science engineering and applications and to establish new collaborations in these areas The Second International Conference on Computer Science Engineering Applications ICCSEA 2012 held in Delhi India during May 25 27 2012 attracted many local and international delegates presenting a balanced mixture of intellect and research both from the East and from the West Upon a strenuous peer review process the best submissions were selected leading to an exciting rich and a high quality technical conference program which featured high impact presentations in the latest developments of various areas of computer science engineering and applications research **Techniques of Scientific Computing for the Energy and Environment** Frédéric Magoulès, 2007 Research and development in scientific computing and computational science has considerably increased the power of numerical simulation Engineers and researchers are now able to solve large and complex problems which were impossible to solve in the past This new book presents some techniques methods and algorithms for solving engineering problems arising in energy and environment applications
