## **A Nationwide Framework For Surveillance Of Cardiovascular And Chronic Lung Diseases:**

**A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases** Institute of Medicine, Board on Population Health and Public Health Practice, Committee on a National Surveillance System for Cardiovascular and Select Chronic Diseases, 2011-08-26 Chronic diseases are common and costly yet they are also among the most preventable health problems Comprehensive and accurate disease surveillance systems are needed to implement successful efforts which will reduce the burden of chronic diseases on the U S population A number of sources of surveillance data including population surveys cohort studies disease registries administrative health data and vital statistics contribute critical information about chronic disease But no central surveillance system provides the information needed to analyze how chronic disease impacts the U S population to identify public health priorities or to track the progress of preventive efforts A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases outlines a conceptual framework for building a national chronic disease surveillance system focused primarily on cardiovascular and chronic lung diseases This system should be capable of providing data on disparities in incidence and prevalence of the diseases by race ethnicity socioeconomic status and geographic region along with data on disease risk factors clinical care delivery and functional health outcomes This coordinated surveillance system is needed to integrate and expand existing information across the multiple levels of decision making in order to generate actionable timely knowledge for a range of stakeholders at the local state or regional and national levels The recommendations presented in A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases focus on data collection resource allocation monitoring activities and implementation The report also recommends that systems evolve along with new knowledge about emerging risk factors advancing technologies and new understanding of the basis for disease This report will inform decision making among federal health agencies especially the Department of Health and Human Services public health and clinical practitioners non governmental organizations and policy makers among others

**Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases** , *A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases* Institute of Medicine, Board on Population Health and Public Health Practice, Committee on a National Surveillance System for Cardiovascular and Select Chronic Diseases, 2011-09-26 Chronic diseases are common and costly yet they are also among the most preventable health problems Comprehensive and accurate disease surveillance systems are needed to implement successful efforts which will reduce the burden of chronic diseases on the U S population A number of sources of surveillance data including population surveys cohort studies disease registries administrative health data and vital statistics contribute critical information about chronic disease But no central surveillance system provides the information needed to analyze how chronic disease impacts the U S population to identify public health priorities or to track the progress of preventive efforts A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases outlines a conceptual framework for

building a national chronic disease surveillance system focused primarily on cardiovascular and chronic lung diseases This system should be capable of providing data on disparities in incidence and prevalence of the diseases by race ethnicity socioeconomic status and geographic region along with data on disease risk factors clinical care delivery and functional health outcomes This coordinated surveillance system is needed to integrate and expand existing information across the multiple levels of decision making in order to generate actionable timely knowledge for a range of stakeholders at the local state or regional and national levels The recommendations presented in A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases focus on data collection resource allocation monitoring activities and implementation The report also recommends that systems evolve along with new knowledge about emerging risk factors advancing technologies and new understanding of the basis for disease This report will inform decision making among federal health agencies especially the Department of Health and Human Services public health and clinical practitioners non governmental organizations and policy makers among others

An Integrated Framework for Assessing the Value of Community-Based Prevention Institute of Medicine,Board on Population Health and Public Health Practice,Committee on Valuing Community-Based, Non-Clinical Prevention Policies and Wellness Strategies,2012-12-29 During the past century the major causes of morbidity and mortality in the United States have shifted from those related to communicable diseases to those due to chronic diseases Just as the major causes of morbidity and mortality have changed so too has the understanding of health and what makes people healthy or ill Research has documented the importance of the social determinants of health for example socioeconomic status and education that affect health directly as well as through their impact on other health determinants such as risk factors Targeting interventions toward the conditions associated with today s challenges to living a healthy life requires an increased emphasis on the factors that affect the current cause of morbidity and mortality factors such as the social determinants of health Many community based prevention interventions target such conditions Community based prevention interventions offer three distinct strengths First because the intervention is implemented population wide it is inclusive and not dependent on access to a health care system Second by directing strategies at an entire population an intervention can reach individuals at all levels of risk And finally some lifestyle and behavioral risk factors are shaped by conditions not under an individual s control For example encouraging an individual to eat healthy food when none is accessible undermines the potential for successful behavioral change Community based prevention interventions can be

designed to affect environmental and social conditions that are out of the reach of clinical services Four foundations the California Endowment the de Beaumont Foundation the W K Kellogg Foundation and the Robert Wood Johnson Foundation asked the Institute of Medicine to convene an expert committee to develop a framework for assessing the value of community based non clinical prevention policies and wellness strategies especially those targeting the prevention of long term chronic diseases The charge to the committee was to define community based non clinical prevention policy and wellness strategies define the value for community based non clinical prevention policies and wellness strategies and analyze current frameworks used to assess the value of community based non clinical prevention policies and wellness strategies including the methodologies and measures used and the short and long term impacts of such prevention policy and wellness strategies on health care spending and public health An Integrated Framework for Assessing the Value of Community Based Prevention summarizes the committee s findings Effective Pandemic Response: Linking Evidence, Intervention, Politics, Organization, And Governance - A World Scientific Reference On Pandemics (In 3 Volumes) ,2024-10-18 This multi volume reference set contributes new thinking and evidence to a critical global issue How can we better understand prepare for and respond to global health crises such as the COVID 19 pandemic which shocked the whole planet in recent years This is foundationally relevant to a global infectious disease crisis but there are other pandemics non communicable diseases mental health climate change commercial impacts on health that also require effective responses This set uniquely combines the evidence and perspectives from diverse disciplines ranging from public health sciences such as epidemiology medical and clinical sciences and social sciences including political science economics and organizational science These views are brought together through an innovative new framework linking evolving disease focused science with analysis of the interaction of Institutions Politics Public Health Systems Organization and Governance processes IPOG to address crises More is needed than the technical perspectives on preparedness and response from public health and medical science to be ready for current and future crises in population health Volume 1 focuses on the gathering of intelligence and evidence and its use for population focused and clinical intervention through the crisis evolution and resolution Volume 2 introduces institutions politics organization of public health systems and governance IPOG as key upstream determinants of pandemic response with insights from social science and its applications in pandemic response It describes the framework and methodology for using the IPOG approach Volume 3 collects a wide range of jurisdiction based analyses of how IPOG factors influenced different experiences in pandemic preparedness and response in case studies of national and sub national experiences in North America South America Africa Northern and Central Europe and South Asia What emerges are imperatives for future investment in preparedness and response for population health for researchers working together across disciplines and for the education and training of future leaders practitioners and researchers All of these efforts should be enhanced and coordinated to recognize the impact of IPOG processes and be prepared to respond to them in future
