A New Science Of Life The Hypothesis Of Formative Causation:

A New Science of Life Rupert Sheldrake, 2005-02-01 The fully revised edition of Rupert Sheldrake's controversial science classic from the author of the bestselling *Dogs That Know When Their Owners are Coming Home* celebrates its 40th anniversary in 2021 After chemists crystallised a new chemical for the first time it became easier and easier to crystallise in laboratories all over the world After rats at Harvard first escaped from a new kind of water maze successive generations learned quicker and quicker Then rats in Melbourne Australia learned yet faster Rats with no trained ancestors shared in this improvement Rupert Sheldrake sees these processes as examples of morphic resonance Past forms and activities of organisms he argues influence organisms in the present through direct connections across time and space Individual plants and animals both draw upon and contribute to the collective memory of their species Sheldrake now Director of the Perrott Warwick Project supported by Trinity College Cambridge reinterprets the regularities of nature as being more like habits than immutable laws Described as the best candidate for burning there has been for many years by Nature on first publication this updated edition will raise hackles and inspire curiosity in equal measure [A New Science of Life](#) Rupert Sheldrake, 1983-01-01 [A New Science of Life](#) Rupert Sheldrake, 1987 [A New Science of Life](#) Rupert Sheldrake, 1988

Morphic Resonance Rupert Sheldrake, 2009-09-09 New updated and expanded edition of the groundbreaking book that ignited a firestorm in the scientific world with its radical approach to evolution Explains how past forms and behaviors of organisms determine those of similar organisms in the present through morphic resonance Reveals the nonmaterial connections that allow direct communication across time and space When *A New Science of Life* was first published the British journal *Nature* called it the best candidate for burning there has been for many years The book called into question the prevailing mechanistic theory of life when its author Rupert Sheldrake a former research fellow of the Royal Society proposed that morphogenetic fields are responsible for the characteristic form and organization of systems in biology chemistry and physics and that they have measurable physical effects Using his theory of morphic resonance Sheldrake was able to reinterpret the regularities of nature as being more like habits than immutable laws offering a new understanding of life and consciousness In the years since its first publication Sheldrake has continued his research to demonstrate that the past forms and behavior of organisms influence present organisms through direct immaterial connections across time and space This can explain why new chemicals become easier to crystallize all over the world the more often their crystals have already formed and why when laboratory rats have learned how to navigate a maze in one place rats elsewhere appear to learn it more easily With more than two decades of new research and data Rupert Sheldrake makes an even stronger case for the validity of the theory of formative causation that can radically transform how we see our world and our future ~Ae

new science of life Rupert Sheldrake, 1985 [Transpersonal Ecosophy, Vol. 1: Theory, Methods and Clinical Assessments](#) Mark A. Schroll, 2016-01-24 The image on the cover of this book represents the idea that brain state alterations at sacred

sites allow us to re experience memories that are woven into the morphogenetic fields of that place an idea that originates with Paul Devereux s empirical enquiry into dreams at sacred sites in Wales and England This books examines how this investigation provides us with a new way of understanding consciousness and a new direction toward a reconciliation of the divorce between matter and spirit We explore the work of David Lukoff and Stanislav and Christina Grof the connections between the varieties of transformative experience in dream studies ecopsychology transpersonal psychology and the anthropology of consciousness as well as the overlap between David Bohm s interpretation of quantum theory and Rupert Sheldrake s hypothesis of formative causation *Biophilosophy* Rolf Sattler,2012-12-06 This book is an introduction to biophilosophy written primarily for the student of biology the practicing biologist and the educated layperson It does not presuppose technical knowledge in biology or philosophy However it requires a willingness to examine the most basic foundations of biology which are so often taken for granted Furthermore it points to the bottomlessness of these foundations the mystery of life the Unnamable I have tried to further the awareness that biological statements are based on philosophical assumptions which are present in our minds even before we enter the laboratory These assumptions which often harbor strong commitments are exposed throughout the book I have tried to show how they influence concrete biological research as well as our personal existence and society Thus emphasis is placed on the connection between biophilosophy and biological research on the one hand and biophilosophy and the human condition on the other **Paradigm Wars** Mark B. Woodhouse,1996 In this powerful exploration of worldviews in transition Mark Woodhouse examines current controversies in the quest for an integrative vision of reality These include alternative medicine holistic education spiritual healing and ecofeminism as well as reincarnation the New Physics extraterrestrial visitations and personal growth In the Appendix Fred Mills contributes a pioneering study of sacred geometry Gaia's Hidden Life Shirley J.
