A Revolution Down On The Farm The Transformation Of American Agriculture Since 1929:

A Revolution Down on the Farm Paul K. Conkin, 2008-09-01 At a time when food is becoming increasingly scarce in many parts of the world and food prices are skyrocketing no industry is more important than agriculture Humans have been farming for thousands of years and yet agriculture has undergone more fundamental changes in the past 80 years than in the previous several centuries In 1900 30 million American farmers tilled the soil or tended livestock today there are fewer than 4 5 million farmers who feed a population four times larger than it was at the beginning of the century Fifty years ago the planet could not have sustained a population of 6 5 billion now commercial and industrial agriculture ensure that millions will not die from starvation Farmers are able to feed an exponentially growing planet because the greatest industrial revolution in history has occurred in agriculture since 1929 with U S farmers leading the way Productivity on American farms has increased tenfold even as most small farmers and tenants have been forced to find other work Today only 300 000 farms produce approximately ninety percent of the total output and overproduction largely subsidized by government programs and policies has become the hallmark of modern agriculture A Revolution Down on the Farm The Transformation of American Agriculture since 1929 charts the profound changes in farming that have occurred during author Paul K Conkin s lifetime His personal experiences growing up on a small Tennessee farm complement compelling statistical data as he explores America s vast agricultural transformation and considers its social political and economic consequences He examines the history of American agriculture showing how New Deal innovations evolved into convoluted commodity programs following World War II Conkin assesses the skills new technologies and government policies that helped transform farming in America and suggests how new legislation might affect farming in decades to come Although the increased production and mechanization of farming has been an economic success story for Americans the costs are becoming increasingly apparent Small farmers are put out of business when they cannot compete with giant non diversified corporate farms Caged chickens and hogs in factory like facilities or confined dairy cattle require massive amounts of chemicals and hormones ultimately ingested by consumers Fertilizers new organic chemicals manure disposal and genetically modified seeds have introduced environmental problems that are still being discovered A Revolution Down on the Farm concludes with an evaluation of farming in the twenty first century and a distinctive meditation on alternatives to our present large scale mechanized subsidized and fossil fuel and chemically dependent system [American Farming Culture and the History of Technology](#) Joshua T.

Brinkman, 2024-05-06 Presenting a history of agriculture in the American Corn Belt this book argues that modernization occurred not only for economic reasons but also because of how farmers use technology as a part of their identity and culture Histories of agriculture often fail to give agency to farmers in bringing about change and ignore how people embed technology with social meaning This book however shows how farmers use technology to express their identities in unspoken ways and provides a framework for bridging the current rural urban divide by presenting a fresh perspective on rural

cultural practices Focusing on German and Jeffersonian farmers in the 18th century and Corn Belt producers in the 1920s the Cold War and the recent period of globalization this book traces how farmers formed their own versions of rural modernity Rural people use technology to contest urban modernity and debunk yokel stereotypes and women specifically employed technology to resist urban gender conceptions This book shows how this performance of rural identity through technological use impacts a variety of current policy issues and business interests surrounding contemporary agriculture from the controversy over genetically modified organisms and hog confinement facilities to the growth of wind energy and precision technologies Inspired by the author s own experience on his family s farm this book provides a novel and important approach to understanding how farmers culture has changed over time and why machinery is such a potent part of their identity This book will be of great interest to students and scholars of agricultural history technology and policy rural studies the history of science and technology and the history of farming culture in the USA All the Facts James W.

explores the issue of ecological and cultural novelty in the archaeological record from a multispecies perspective Human exceptionalism and our place in nature have long been topics of academic consideration and archaeology has been synonymous with an exclusively human past to the detriment of gaining a more nuanced understanding of one that is shared Encompassing more than just our relationships with animals the book considers what we can learn about the human past without humans as the focus of the question The volume digs deep into our understanding of interaction with plants fungi microbes and even the fundamental building blocks of life DNA *Multispecies Archaeology* examines what it means to be human and non human from a variety of perspectives providing a new lens through which to view the past Challenging not only the subject or object of archaeology but also broader disciplinary identities the volume is a landmark in this new and evolving area of scholarly interest **The Hughes Court** Mark V. Just Food James E. McWilliams, 2009-08-26 We suffer today from food anxiety bombarded as we are with confusing messages about how to eat an ethical diet Should we eat locally Is organic really better for the environment Can genetically modified foods be good for you Just Food does for fresh food what Fast Food Nation did for fast food challenging conventional views and cutting through layers of myth and misinformation For instance an imported tomato is more energy efficient than a local greenhouse grown tomato And farm raised freshwater fish may soon be the most sustainable source of protein Informative and surprising Just Food tells us how to decide what to eat and how our choices can help save the planet and feed the world

Food Policy and Food Security Stephen K. Wegren, Alexander Nikulin, Irina Trotsuk, 2018-03-28 This book provides a comprehensive analysis of Russian food policy Food policy is defined as the way government policy influences food production and distribution Russia's food policy is important for several reasons The first and most obvious reason is that a dysfunctional food policy is symptomatic of larger political and societal problems A failing food policy is often the precursor to political instability Russian food policy is also important due to the agricultural recovery since 2004 that has allowed Russia to become self-sufficient in grain production Being food sufficient in grain means that Russia is not drawing upon global grain supply Even more important Russia now produces surpluses and has become a global grain supplier Moreover the agricultural recovery has made the country food secure traditionally defined as having enough food for a healthy life An analysis of food policy reveals that the structure of food production has changed with the emergence of mega farms called agrohholdings that are horizontally and vertically integrated Agrohholdings represent a concentration of capital and land with a small number of farms producing large percentages of total food output The book explores alternatives to the industrial agricultural model by discussing different variants of sustainable agriculture A final importance of Russian food policy concerns food trade Russia has become more protectionist since 2012 The food embargo against Western nations 2014-2017 is one example so too is import substitution that is a core component of food policy The book demonstrates the politicalization of external food trade Food trade and denial of access to the Russian market is used as an instrument of foreign policy to punish countries with whom Russia has disagreements Current Russian policymakers have food resources to augment support and extend national interests abroad Russia historically has cycled through periods of integration and isolation from the West This book raises the question whether a new normal has arisen that is characterized by the permanent withdrawal from integration as evidenced by its nationalist and protectionist food policy The book is entirely original rich in detail and broad in scope It is based on field work survey data a wide reading of primary sources and the secondary literature all of which are linked to important policy questions in development studies and food studies It is destined to become a classic book on Russian food policy
