Advanced Array Systems, Applications and RF Technologies Nicholas Fourikis, 2000-05-16 Advanced Array Systems Applications and RF Technologies adopts a holistic view of arrays used in radar electronic warfare communications remote sensing and radioastronomy Radio frequency RF and intermediate frequency IF signal processing is assuming a fundamental importance owing to its increasing ability to multiply a system's capabilities in a cost effective manner This book comprehensively covers the important front end RF subsystems of active phased arrays so offering array designers new and exciting opportunities in signal processing Provides an up to date record of existing systems from different applications Explores array systems under development Bridges the gap between textbook coverage of idealized phased arrays and practical knowledge of working phased arrays Recognises the significance of cost to the realization of phased arrays Discusses future advances in the field that promise to deliver even more affordable arrays intelligent or self focussing cohering arrays

Signal Processing for Active Control Stephen Elliott, 2000-09-26 Signal Processing for Active Control sets out the signal processing and automatic control techniques that are used in the analysis and implementation of active systems for the control of sound and vibration After reviewing the performance limitations introduced by physical aspects of active control Stephen Elliott presents the calculation of the optimal performance and the implementation of adaptive real time controllers for a wide variety of active control systems Active sound and vibration control are technologically important problems with many applications Active control means controlling disturbance by superimposing a second disturbance on the original source of disturbance Put simply initial noise other specially generated noise or vibration silence or controlled noise This book presents a unified approach to techniques that are used in the analysis and implementation of different control systems It includes practical examples at the end of each chapter to illustrate the use of various approaches This book is intended for researchers engineers and students in the field of acoustics active control signal processing and electrical engineering

Signal Processing Noise Vyacheslav Tuzlukov, 2018-10-08 Additive and multiplicative noise in the information signal can significantly limit the potential of complex signal processing systems especially when those systems use signals with complex phase structure During the last few years this problem has been the focus of much research and its solution could lead to profound improvements in applications of complex signals and coherent signal processing Signal Processing Noise sets forth a generalized approach to signal processing in multiplicative and additive noise that represents a remarkable advance in signal processing and detection theory This approach extends the boundaries of the noise immunity set by classical and modern signal processing theories and systems constructed on this basis achieve better detection performance than that of systems currently in use Featuring the results of the author's own research the book is filled with examples and applications and each chapter contains an analysis of recent observations obtained by computer modelling and experiments Tables and illustrations clearly show the superiority of the generalized approach over both classical and modern approaches

to signal processing noise Addressing a fundamental problem in complex signal processing systems this book offers not only theoretical development but practical recommendations for raising noise immunity in a wide range of applications

Metamaterials and Metasurfaces Mohammad Rashed Iqbal Faruque,2025-04-21 Metamaterial is an artificially constructed material that interacts differently with light and sound waves than standard natural materials The book gives a comprehensive overview of metamaterials and their properties and the most prevalent structural designs for microwave and terahertz frequencies The authors introduce new coding metamaterial for specific absorption rate SAR reduction applications in 5G Cellular Networks They present conventional metamaterial with unique properties ultra thin wide band and mu negative MNG characteristics for terahertz frequency application The authors explore radiation protection spanning fundamental concepts to the latest technologies critically analyze how metamaterials contribute to the enhancement of safety and precision in radiation therapy They cover metamaterial absorbers navigate the domain of coding metamaterials emphasizing their distinctive properties and pivotal role in RCS reduction and EMI shielding
