Advances In Open Domain Question Answering Text Speech And Language Technology:

Advances in Open Domain Question Answering Tomek Strzalkowski, Sanda Harabagiu, 2006-10-07 Automated question answering the ability of a machine to answer questions simple or complex posed in ordinary human language is one of today's most exciting technological developments. It has all the markings of a disruptive technology, one that is poised to displace the existing search methods and establish new standards for user centered access to information. This book gives a comprehensive and detailed look at the current approaches to automated question answering. The level of presentation is suitable for newcomers to the field as well as for professionals wishing to study this area and/or to build practical QA systems. The book can serve as a how-to handbook for IT practitioners and system developers. It can also be used to teach advanced graduate courses in Computer Science, Information Science and related disciplines. The readers will acquire in depth practical knowledge of this critical new technology.

Text Mining with MATLAB® Rafael E. Banchs, 2011-10-21 Text Mining with MATLAB provides a comprehensive introduction to text mining using MATLAB. It is designed to help text mining practitioners as well as those with little to no experience with text mining in general familiarize themselves with MATLAB and its complex applications. The book is structured in three main parts. The first part, Fundamentals, introduces basic procedures and methods for manipulating and operating with text within the MATLAB programming environment. The second part of the book, Mathematical Models, is devoted to motivating, introducing and explaining the two main paradigms of mathematical models most commonly used for representing text data: the statistical and the geometrical approach. Eventually, the third part of the book, Techniques and Applications, addresses general problems in text mining and natural language processing applications such as document categorization, document search, content analysis, summarization, question answering and conversational systems. This second edition includes updates in line with the recently released Text Analytics Toolbox within the MATLAB product and introduces three new chapters and six new sections in existing ones. All descriptions presented are supported with practical examples that are fully reproducible. Further reading as well as additional exercises and projects are proposed at the end of each chapter for those readers interested in conducting further experimentation.
