Constructing Scientific Understanding Through Contextual Teaching Peter Heering, Daniel Osewold, 2007-01-01 Learning by Doing is about the history of experimentation in science education The teaching of science through experiments and observation is essential to the natural sciences and its pedagogy These have been conducted as both demonstration or as student exercises The experimental method is seen as giving the student vital competence skills and experiences both at the school and at the university level This volume addresses the historical development of experiments in science education which has been largely neglected so far The contributors of Learning by Doing pay attention to various aspects ranging from economic aspects of instrument making for science teaching to the political meanings of experimental science education from the 17th to the 20th century This collected volume opens the field for further debate by emphasizing the importance of experiments for both historians of science and science educators

Taking Science to School National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Board on Science Education, Committee on Science Learning, Kindergarten Through Eighth Grade, 2007-05-16 What is science for a child How do children learn about science and how to do science Drawing on a vast array of work from neuroscience to classroom observation Taking Science to School provides a comprehensive picture of what we know about teaching and learning science from kindergarten through eighth grade By

looking at a broad range of questions this book provides a basic foundation for guiding science teaching and supporting students in their learning Taking Science to School answers such questions as When do children begin to learn about science Are there critical stages in a child s development of such scientific concepts as mass or animate objects What role does nonschool learning play in children s knowledge of science How can science education capitalize on children s natural curiosity What are the best tasks for books lectures and hands on learning How can teachers be taught to teach science The book also provides a detailed examination of how we know what we know about children s learning of science about the role of research and evidence This book will be an essential resource for everyone involved in K 8 science education teachers principals boards of education teacher education providers and accreditors education researchers federal education agencies and state and federal policy makers It will also be a useful guide for parents and others interested in how children learn

Bridging Theory and Practice in Teacher Education ,2007-01-01 This book addresses both the concerns of teacher candidates and their misconceptions about the relation of theory and practice in education The contributors to this volume share the belief that theories provide teachers with a frame of reference and a language with which to name and critically analyze many of the problems they face daily The significance of theory is in its ability to define the problems that teachers face clarify their confusions and suggest possible solutions to these problems Once educational theories are viewed as guides to thought and instruments of interpretation rather than as established facts it becomes clear that they cannot simply be plugged into a particular classroom Instead a theory must be applied in more nuanced and contextual ways taking into account the social historical context in which it was created as well as the various particulars of each classroom situation Experienced educators and scholars in the field have been recruited to write essays that speak to the relevance of different theories in philosophy psychology sociology English history science art technology and multiculturalism for the practice of teaching This book would appeal to teacher educators teacher candidates and teachers in general
