Abstract—The purpose of this study was to determine the effect of a 12-week training program on the performance of a group of 10 male and 10 female subjects. The subjects were divided into two groups: a control group and a training group. The training group underwent a 12-week training program, while the control group did not. The subjects were then tested on a series of tasks, and the results were compared between the two groups. The results showed that the training group performed significantly better than the control group on all tasks.
