Chapter 41: Animal Nutrition

Concept 41.1 *An animal's diet must supply chemical energy, organic molecules, and essential nutrients*

- When asked "Why do animals eat?" you might answer something like "in order to live." However, this would not be a college-level response, so carefully read the first two paragraphs of this concept to pull out what animals must obtain from the food they eat.
- What are *essential amino acids*? What must vegetarians do in order to obtain them?
- Table 41.1 presents a comprehensive list of vitamins, their dietary sources and functions, and the symptoms of deficiency or excess. Are you surprised to see that vitamin overdoses are possible? How could an individual have extreme excess of a vitamin?
- Which category of vitamin, *water-soluble* or *fat-soluble*, is most likely to result in overdose? Why?
- This is not a nutrition course, so you will not have to know this entire chart. But let's pull out a few terms that you are most likely to hear about. Complete this chart.

Deficiency Disorder	Symptoms	Vitamin Deficient?	Dietary Source?
<i>beriberi</i>			
<i>scurvy</i>			
<i>rickets</i>			
	Neural tube defects in babies (see end of concept)		
	Night blindness

giving properties and conversely to isolate their less desirable properties with a view to reducing or removing them altogether from some foods The analysis of mineral elements requires a number of different techniques some methods may be suitable for one food type yet completely unsuited to another The Handbook of Mineral Elements in Food is the first book to bring together the analytical techniques the regulatory and legislative framework and the widest possible range of food types into one comprehensive handbook for food scientists and technologists Much of the book is based on the authors own data most of which is previously unpublished making the Handbook of Mineral Elements in Food a vital and up to the minute reference for food scientists in industry and academia alike Analytical chemists nutritionists and food policy makers will also find it an invaluable resource Showcasing contributions from international researchers and constituting a major resource for our future understanding of the topic the Handbook of Mineral Elements in Food is an essential reference and should be found wherever food science and technology are researched and taught

The Meat Question Josh Berson, 2019-10-22 A provocative argument that eating meat is not what made humans human and that the future is not necessarily carnivorous Humans are eating more meat than ever Despite ubiquitous Sweetgreen franchises and the example set by celebrity vegans demand for meat is projected to grow at twice the rate of demand for plant based foods over the next thirty years Between 1960 and 2010 per capita meat consumption in the developing world more than doubled in China meat consumption grew ninefold It has even been claimed that meat made us human that our disproportionately large human brains evolved because our early human ancestors ate meat In The Meat Question Josh Berson argues that not only did meat not make us human but the contemporary increase in demand for meat is driven as much by economic insecurity as by affluence Considering the full sweep of meat s history Berson concludes provocatively that the future is not necessarily carnivorous Berson an anthropologist and historian argues that we have the relationship between biology and capitalism backward We may associate meat eating with wealth but in fact meat eating is a sign of poverty cheap meat hunger killing easy to prepare eaten on the go enables a capitalism defined by inequality To answer the meat question says Berson we need to think about meat eating in a way that goes beyond Paleo diets and PETA protests to address the deeply entwined economic and political lives of humans and animals past present and future
