formation by staphylococci and streptococci: Structural, functional and regulatory aspects and implications for pathogenesis Joan A. Geoghegan, Pietro Speziale, 2015-06-25 Members of the genus Staphylococcus and Streptococcus are the causative agents of many human and animal diseases Over the past decade the complete sequencing of many staphylococcal and streptococcal genomes has promoted a significant advance in our knowledge of these important pathogens The pathogenicity of these bacteria is due to the expression of a large variety of virulence factors Such determinants which are cell wall associated and secreted proteins include adhesins that confer to the pathogen the ability to attach to extracellular matrix plasma and host cell surfaces proteins that contribute to host cell invasion and intracellular survival and soluble factors that decrease phagocytosis and modulate the immune response Furthermore these Gram positive cocci in many natural environments heart valve lung oral cavity throat and infections on implanted devices live in matrix encased groups known as biofilms Biofilms are specialized bacterial communities with high order organization analogous to that of a tissue in multicellular organism that adhere to abiotic or biological substrata and produce an exopolymeric matrix composed of polysaccharides proteins DNA or combination thereof Bacteria within a biofilm persist in adverse conditions show resistance to killing by antibiotics and to host immune defences and are difficult to eradicate and treat clinically Therefore understanding the mechanisms of biofilm development will allow us to effectively combat staphylococcal streptococcal biofilm based infections This Research Topic will focus on the molecular components involved in biofilm formation by staphylococci and streptococci the role they play in the development maturation and dispersal of biofilm and on the regulatory aspects of such complex processes The implication for the pathogenesis of infective diseases and potential therapeutic strategies against biofilm based infections will be also discussed The articles will highlight both the recent advances and future challenges inherent in this rapidly evolving area **Surface-Functionalized Ceramics** Laura Treccani, Fabian Meder, 2022-12-14 Surface Functionalized Ceramics Focused coverage of making and using functional ceramic materials for a wide variety of scientific and technical applications Surface Functionalized Ceramics provides a comprehensive overview of surface functionalization approaches for ceramic materials including alumina zirconia titania and

Marine Biological Materials of Invertebrate Origin Hermann Ehrlich,2019-10-17 The work is a source of modern knowledge on biomineralization biomimetics and bioinspired materials science with respect to marine invertebrates The author gives the most coherent analysis of the nature origin and evolution of biocomposites and biopolymers isolated from and observed in the broad diversity of marine invertebrate organisms and within their unusual structural formations The basic format is that of a major review article with liberal use of references to original literature There is a wealth of new and newly synthesized information including dozens of previously unpublished images of unique marine creatures and structures from nano to microscale including high resolution scanning and transmission electron micrographs The material is organized effectively along both biological phyla and functional lines The classification of biological materials of marine origin is proposed and discussed Much of the pertinent data is organized into tables and extensive use is made of electron micrographs and line drawings Several modern topics e g biomineralization demineralization remineralization phenomena or phenomenon of multiphase biomineralization are discussed in details Traditionally such current concepts as hierarchical organization of biocomposites and skeletal structures structural bioscaffolds biosculpturing biomimetism and bioinspiration as tools for the

design of innovative materials are critically analyzed from both biological and materials science point of view using numerous unique examples of marine origin This monograph reviews the most relevant advances in the marine biomaterials research field pointing out several approaches being introduced and explored by distinct laboratories
