Body Composition And Physical Performance Applications For The Military Services:

Body Composition and Physical Performance Institute of Medicine, Committee on Military Nutrition Research, 1992-02-01
This book surveys the entire field of body composition as it relates to performance. It includes a clear definition of terminology and a discussion of the various methods for measuring body composition. The authored papers represent a state of the art review of this controversial field and address questions such as: What is a better measure of body composition: body fat or lean body mass? Does being overweight for one's height really affect performance? The book also addresses the issue of physical appearance as it relates to body fatness and performance. It includes an in-depth discussion of many of the topics of interest to those involved in sports medicine and exercise physiology. *Body Composition* Henry C. Lukaski, 2017-07-20
Interest in the relationships between body structure and function in physical activity has persisted for centuries. *Body Composition: Health and Performance in Exercise and Sport* advances understanding beyond simple descriptions of body physique and composition of athletes and fills gaps in our understanding of the important role of muscle, fat, and bone in facilitating physical performance and health in sports and physically demanding occupations. It addresses basic practical and applied topics in body composition, performance, and health with comprehensive reviews organized in four logical parts: *Body Composition Assessment*, *Physical Activity and Body Composition*, *Body Composition in Sports and Occupations*, and *Moderating Factors*. This book integrates state-of-the-art knowledge by international experts in the field and produces an evidence-based practical guide for a balanced understanding of the role and use of body composition assessment in physical performance and health for youth and adults. It also provides a needed link between the practice of body composition assessment and its application by members of public health advisory committees that develop national guidelines for diet, physical activity, and health. This book is suitable for students and professionals in sports nutrition, exercise science, kinesiology, and athletic training. Sport administrators and policy makers for international and national sport federations and organizations and national intercollegiate and scholastic federations would also benefit from this book. **Emerging Technologies for Nutrition Research** Institute of Medicine, Committee on Military Nutrition Research, 1997-10-03
The latest of a series of publications based on workshops sponsored by the Committee on Military Nutrition Research, this book's focus on emerging technologies for nutrition research arose from a concern among scientists at the U.S. Army Research Institute of Environmental Medicine that traditional nutrition research using standard techniques centered more on complex issues of the maintenance or enhancement of performance and might not be sufficiently substantive either to measure changes in performance or to predict the effects on performance of stresses soldiers commonly experience in operational environments. The committee's task was to identify and evaluate new technologies to determine whether they could help resolve important issues in military nutrition research. The book contains the committee's summary and recommendations as well as individually authored chapters based on presentations at a 1995 workshop. Other chapters cover techniques of body

composition assessment tracer techniques for the study of metabolism ambulatory techniques for the determination of energy expenditure molecular and cellular approaches to nutrition the assessment of immune function and functional and behavioral measures of nutritional status Assessing Fitness for Military Enlistment National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on the Youth Population and Military Recruitment: Physical, Medical, and Mental Health Standards, 2006-02-27 The U S Department of Defense DoD faces short term and long term challenges in selecting and recruiting an enlisted force to meet personnel requirements associated with diverse and changing missions The DoD has established standards for aptitudes abilities medical conditions and physical fitness to be used in selecting recruits who are most likely to succeed in their jobs and complete the first term of service generally 36 months In 1999 the Committee on the Youth Population and Military Recruitment was established by the National Research Council NRC in response to a request from the DoD One focus of the committee s work was to examine trends in the youth population relative to the needs of the military and the standards used to screen applicants to meet these needs When the committee began its work in 1999 the Army the Navy and the Air Force had recently experienced recruiting shortfalls By the early 2000s all the Services were meeting their goals however in the first half of calendar year 2005 both the Army and the Marine Corps experienced recruiting difficulties and in some months shortfalls When recruiting goals are not being met scientific guidance is needed to inform policy decisions regarding the advisability of lowering standards and the impact of any change on training time and cost job performance attrition and the health of the force Assessing Fitness for Military Enlistment examines the current physical medical and mental health standards for military enlistment in light of 1 trends in the physical condition of the youth population 2 medical advances for treating certain conditions as well as knowledge of the typical course of chronic conditions as young people reach adulthood 3 the role of basic training in physical conditioning 4 the physical demands and working conditions of various jobs in today s military services and 5 the measures that are used by the Services to characterize an individual s physical condition The focus is on the enlistment of 18 to 24 year olds and their first term of service Assessing Readiness in Military Women Institute of Medicine, Food and Nutrition Board, Committee on Body Composition, Nutrition, and Health of Military Women, 1998-01-01 U S military personnel are required to adhere to standards of body composition fitness and appearance to achieve and maintain readiness that is the maintenance of optimum health and performance so they are ready for deployment at any moment In 1992 the Committee on Military Nutrition Research reviewed the existing standards and found among other things that the standards for body composition required for women to achieve an appearance goal seemed to conflict with those necessary to ensure the ability to perform many types of military tasks This report addresses that conflict and reviews and makes recommendations about current policies governing body composition and fitness as well as postpartum return to duty standards Military Recommended Dietary Allowances and physical activity and nutritional
