

An abstract, three-dimensional geometric structure composed of interconnected lines and spheres, resembling a molecular model or a complex network. The structure is rendered in shades of gray and white against a black background. It features a central sphere connected to several other spheres, with lines forming a complex, interconnected web. Some lines are thicker and more prominent than others, creating a sense of depth and complexity.

Automatic Quantum Computer Programming A Genetic Programming Approach:

Automatic Quantum Computer Programming Lee Spector, 2006-04-18 Automatic Quantum Computer Programming provides an introduction to quantum computing for non physicists as well as an introduction to genetic programming for non computer scientists The book explores several ways in which genetic programming can support automatic quantum computer programming and presents detailed descriptions of specific techniques along with several examples of their human competitive performance on specific problems Source code for the author's QGAME quantum computer simulator is included as an appendix and pointers to additional online resources furnish the reader with an array of tools for automatic quantum computer programming

Variation-Aware Analog Structural Synthesis Trent McConaghy, Pieter Palmers, Gao Peng, Michiel Steyaert, Georges Gielen, 2009-07-13 This book describes new tools for front end analog designers starting with global variation aware sizing and extending to novel variation aware topology design The tools aid design through automation but more importantly they also aid designer insight through automation We now describe four design tasks each more general than the previous and how this book contributes design aids and insight aids to each The first designer task targeted is global robust sizing This task is supported by a design tool that does automated globally reliable variation aware sizing SANGRIA and an insight aiding tool that extracts designer interpretable whitebox models that relate sizings to circuit performance CAFFEINE SANGRIA searches on several levels of problem difficulty simultaneously from lower cheap to evaluate exploration layers to higher full evaluation exploitation layers structural homotopy SANGRIA makes maximal use of circuit simulations by performing scalable data mining on simulation results to choose new candidate designs CAFFEINE accomplishes its task by treating function induction as a tree search problem It constrains its tree search space via a canonical functional form grammar and searches the space with grammatically constrained genetic programming The second designer task is topology selection topology design Topology selection tools must consider a broad variety of topologies such that an appropriate topology is selected must easily adapt to new semiconductor process nodes and readily incorporate new topologies Topology design tools must allow designers to creatively explore new topology ideas as rapidly as possible

New Achievements in Evolutionary Computation Peter Korosec, 2010-02-01 Evolutionary computation has been widely used in computer science for decades Even though it started as far back as the 1960s with simulated evolution the subject is still evolving During this time new metaheuristic optimization approaches like evolutionary algorithms genetic algorithms swarm intelligence etc were being developed and new fields of usage in artificial intelligence machine learning combinatorial and numerical optimization etc were being explored However even with so much work done novel research into new techniques and new areas of usage is far from over This book presents some new theoretical as well as practical aspects of evolutionary computation This book will be of great value to undergraduates graduate students researchers in computer science and anyone else with an interest in learning about the latest developments in evolutionary computation
