

Answers	Marks	Examiner's tips
(b) (i) 48, 56–58, 51–54 (<i>all correct</i>); (ii) description – increase up to 48/optimum (<i>allow ECF from (i)</i>); decrease above 48/optimum (<i>allow ECF from (i)</i>); explanation of increase – increased KE/move faster; therefore more collisions/more enzyme–substrate complexes formed with active site; explanation of decrease – denaturation/3D structure changed/ tertiary structure changed; detail, e.g. breaking of hydrogen/sulfur bonds (<i>reject peptide bonds</i>); shape of active site changed; substrate no longer fits;	1 6 max	Plan out your answer to make sure you cover every part of the question. Write your answer in full sentences. ECF means error carried forward. If you made a mistake in interpreting the graph, you will not lose marks for repeating the same mistake. For example, if you had the optimum temperature as 38 instead of 48 and you wrote increase up to 38, you would get a mark in (ii) even though the number was incorrect. This means that you do not lose more than 1 mark for one mistake. Do not confuse the bonds. Hydrogen and sulfur bonds hold the molecule in shape, peptide bonds join amino acids together.
4 (a) maximum rate at which enzyme can combine with substrate/form enzyme–substrate complexes/substrate no longer limiting/enzyme is a limiting factor;	2	The enzymes or their active sites are not used up.
(b) inhibitor attaches to enzyme away from the active site; changes shape of active site; prevents formation of enzyme–substrate complex;	2	
(c) 26.32% (<i>accept 26% or 26.3%</i>);	2 max	The maximum rate is the highest rate on the graph. Without inhibitor the rate is 7.6 arbitrary units. With inhibitor the rate is 5.6 arbitrary units. The percentage decrease in rate = (decrease in rate/maximum rate) $\times$ 100, i.e. $((7.6 - 5.6)/7.6) \times 100$. You will gain 1 mark for knowing the principle and 1 mark for the correct answer.
(d) curve below top curve (without inhibitor) joining to top curve/ continues to increase to end of x-axis	1	You must start your curve at the origin. It must not go above the curve shown for the reaction without the inhibitor.
