

Technical installation instructions

Board and batten

This document outlines the key requirements for properly installing the board and batten profile in Maibec CanExel™ substrate. **THIS DOCUMENT IN NO WAY REPLACES THE COMPLETE MAIBEC CANEXEL™ INSTALLATION GUIDE, WHICH MUST BE FOLLOWED IN ITS ENTIRETY.**

WALL PREPARATION

DOUBLE FURRING

- Install vertical furring strips of at least 3/8" thick.
- Then install horizontal 1" x 3" furring strips over the vertical furring strips every 16".
- **Double furring is mandatory in Quebec and the Maritimes** to ensure continuous ventilation and water drainage. Recommended in Ontario. (FIGURE 1)
- **Diagonal furring is allowed in Quebec, Ontario and Maritimes.** Furring strips must be a minimum of 25 mm actual (1") thick and nailed directly into the framing or combined structural wood sheathing and framing.
- **Horizontal furring only allowed in Ontario** provided you have:
 - Furring strips every 16".
 - 1" spacing between the ends of furring strips for adequate water drainage.
 - A full 1" nailing base, obtained either by combining a furring strip and OSB or plywood or by using an actual 1" or 2" x 3" furring strip.

Double furring is strongly recommended for foam insulation panels or insulating concrete forms (ICF). This will allow any heat or moisture accumulated between the siding and the foam/ICF insulation to evacuate more readily, resulting in optimal siding performance.

NAILS/FASTENING OF THE BOARD

When possible, maintain a minimum 1-1/4" fastener penetration into the stud, sheathing, or combination thereof.

- Nailable sheathing may be included in the penetration requirement.
- 1 1/8" minimum stud penetration for spiral shank.

Increase nail penetration if code requires.
