CONTINUUM™

NetController CPU Module

The Continuum NetController is the high-powered Central Processing Unit (CPU) module and network manager for the Andover Controls Continuum intelligent building system. With its 8 Mb DRAM, 4 Mb flash EPROM, math co-processor, and four programmable communications ports, including an interface to Infinity's Infinet distributed controllers, the Continuum NetController provides a total solution for facility-wide network communications and information management. A lower-cost version of the NetController is also available with 4Mb DRAM, 2 Mb flash EPROM, and no math co-processor.

HIGH-SPEED COMMUNICATIONS

The NetController acts as the system coordinator, providing integrated global control and monitoring, history logging, and local and remote alarming for both the Continuum I/O modules and the RS-485 Infinet controllers that control your individual building services—heating, ventilating, air conditioning, lighting, access control, smoke control, and more. The NetController communicates with the Continuum I/O modules via Lon communications and a choice of RS-485 or free topology bus media.

An optional Ethernet port also allows the NetController to communicate with other NetControllers and Continuum Workstations over a high-speed 10Mb Ethernet Local Area Network (LAN) using the TCP/IP protocol. Continuum workstations are capable of communicating with up to 4 million nodes on Ethernet. Two different Ethernet interfaces are available—you can choose either a 10BASE-2 (thin coax) or 10BASE-T (twisted pair/cable media).

NetController's flash EPROM allows you to download software revisions over Ethernet using a Continuum workstation. This flash memory feature eliminates the need to perform EPROM change-outs in the field.

SERIAL COMMUNICATIONS

NetController's four programmable communications ports can be configured as either an RS-232 or an RS-485 interface to modems, printers, third-party devices, and up to two Infinity Infinet field controller networks. Andover Controls has developed an extensive library of third-party software interfaces, including controls for chiller panels, fire alarm systems, emergency generator systems, bar code readers, elevator controls, video matrix switchers, and more.

PLAIN ENGLISH™ PROGRAMMING

The Continuum NetController can be configured to meet the exact requirements of your application using the powerful Andover Controls Plain English programming language. Programs are entered into NetController using the Continuum Workstation. The program is then stored in, and executed by, the NetController. Just as with Infinity, one simple language is used system-wide.
