Katz,2015-09-11 The role of design in the formation of the Silicon Valley ecosystem of innovation California's Silicon Valley is home to the greatest concentration of designers in the world corporate design offices at flagship technology companies and volunteers at nonprofit NGOs global design consultancies and boutique studios research laboratories and academic design programs Together they form the interconnected network that is Silicon Valley Apple products are famously Designed in California but as Barry Katz shows in this first ever extensively illustrated history the role of design in Silicon Valley began decades before Steve Jobs and Steve Wozniak dreamed up Apple in a garage Offering a thoroughly original view of the subject Katz tells how design helped transform Silicon Valley into the most powerful engine of innovation in the world From Hewlett Packard and Ampex in the 1950s to Google and Facebook today design has provided the bridge between research and development art and engineering technical performance and human behavior Katz traces the origins of all of the leading consultancies including IDEO frog and Lunar and shows the process by which some of the world's most influential companies came to place design at the center of their business strategies At the same time universities foundations and even governments have learned to apply design thinking to their missions Drawing on unprecedented access to a vast array of primary sources and interviews with nearly every influential design leader including Douglas Engelbart Steve Jobs and Don Norman Katz reveals design to be the missing link in Silicon Valley's ecosystem of innovation [Design Rules, Volume 2](#)

Carliss Y. Baldwin,2024-12-17 How the innate physical properties of different technologies influence the strategy and structure of the organizations implementing the technologies the sequel to Design Rules The Power of Modularity In Design Rules volume 2 Carliss Baldwin offers a comprehensive view of the digital economy by putting forth an original theory that explains how technology shapes organizations in a market economy The theory claims that complementarities arising from the physical nature of technologies can be arrayed on a spectrum ranging from strong to very weak Two basic types of technologies in turn exhibit different degrees of complementarity between their internal components Flow production technologies which are found in steel mills and auto factories specify a series of steps each of which is essential to the final product In contrast platform technologies which are characteristic of computer hardware software and networks are modular

systems designed to provide options Baldwin then investigates the dynamics of strategy for firms in platform ecosystems Such firms create value by solving technical bottlenecks technical barriers to performance that arise in different parts of the system as it evolves They capture value by controlling and defending strategic bottlenecks components that are 1 essential to the functioning of some part of the system 2 unique and 3 controlled by a profit seeking enterprise Strategic bottlenecks can be acquired by solving technical bottlenecks They can be destroyed via tactics such as substitution reverse engineering bypassing the bottleneck and enveloping a smaller bottleneck within a larger one Strategy in platform ecosystems can thus be viewed as the effective management of technical and strategic bottlenecks within a modular technical system
