Animal Models For The Study Of Human Disease:

Animal Models for the Study of Human Disease P. Michael Conn, 2013-05-29 *Animal Models for the Study of Human Disease* identifies important animal models and assesses the advantages and disadvantages of each model for the study of human disease. The first section addresses how to locate resources, animal alternatives, animal ethics, and related issues much needed information for researchers across the biological sciences and biomedicine. The next sections of the work offers models for disease oriented topics including cardiac and pulmonary diseases, aging, infectious diseases, obesity, diabetes, neurological diseases, joint diseases, visual disorders, cancer, hypertension, genetic diseases, and diseases of abuse. Organized by disease orientation for ease of searchability. Provides information on locating resources, animal alternatives, and animal ethics. Covers a broad range of animal models used in research for human disease. **Animal Models for the Study of Human Disease** P. Michael Conn, 2017-06-20 *Animal Models for the Study of Human Disease* Second Edition provides needed information on model sharing, animal alternatives, animal ethics, and access to databanks of models bringing together common descriptions of models for busy researchers across biomedical and biological sciences. Offering easily searchable advantages and disadvantages for each animal model and organized by disease topics, this resource aids researchers in finding the best animal model for research in human disease. Organized by disease orientation for ease of searchability. Provides information on locating resources, animal alternatives, and animal ethics. Covers a broad range of animal models used in research for human disease. Contributed by leading experts across the globe. Expanded coverage of diabetes and neurological diseases. Animal Models for the Study of Human Disease Alistair McGregor, K. Yeon Choi, Scott Schachtele, James Lokensgard, 2013-05-29 This chapter reviews the various human herpesviruses (HHVs) and their associated diseases. Animal models have been developed to study some HHVs and these as well as development of intervention strategies using these models are discussed. Additionally, specific protocols are included to enable investigators to use the current state of the art techniques to explore various aspects of viral infection in animal models. The protocols presented in this chapter are a collection of techniques that are generally applicable to the study of all herpesviruses in animal models and can be utilized by both the experienced and inexperienced virologist. Animal Models for the Study of Human Disease Judith Axler Turner, 2013-05-29 Identifying and selecting the most appropriate animal model is a challenge, but the U.S. Federal Government's National Institutes of Health has supported several efforts to make the job of finding disease models easier. These efforts began with support for databases about specific species and have graduated to support for discipline specific studies and cross species resources. This article tracks LAMHDI, the initiative to Link Animal Models to Human Disease, www.lamhdi.org which brings together data about five species: flies, mice, rats, yeast, and zebrafish, and allows scientists to search across these data principally by disease and gene. This chapter explains how LAMHDI was conceived and where LAMHDI hopes to go in moving into phenotypical as well as genotypical data through networks and visualization.

Animal Models for the Study of Human Disease Daniel Butzke, Barbara Grune, Josephine Kugler, Michael Oelgeschläger, Andrea Seiler, Dana Sittner, Manfred Liebsch, Andreas Luch, 2013-05-29 The first years of the 21st century have seen an unparalleled progress in biomedical sciences Several dogmata that haunted scientific debate for decades were easily abandoned and there is a fundamental shift away from eminence based toward evidence based assessment of preclinical models probing their true value in predicting clinical outcomes of human diseases Likewise several new approaches e g stem cell based diseases in a dish and organs on a chip and lab on a chip technologies have revitalized the domain of alternatives to animal experimentation In our review we portray these and other efforts to bring forth relevant and ethically inoffensive models of human diseases

Animal Models for the Study of Human Disease Sara I. Ruiz, Elizabeth E. Zumbrun, Aysegul Nalca, 2013-05-29 As the threat of exposure to emerging and reemerging viruses within a naive population increases it is vital that the basic mechanisms of pathogenesis and immune response be thoroughly investigated By using animal models in this endeavor the response to viruses can be studied in a more natural context to identify novel drug targets and assess the efficacy and safety of new products This is especially true in the advent of the Food and Drug Administration s animal rule Although no one animal model is able to recapitulate all the aspects of human disease understanding the current limitations allows for a more targeted experimental design Important facets to be considered before an animal study are the route of challenge species of animals biomarkers of disease and a humane endpoint This chapter covers the current animal models for medically important human viruses and demonstrates where the gaps in knowledge exist

Animal Models for the Study of Human Disease Kristine Coleman, James L. Weed, Steven J. Schapiro, 2013-05-29 Environmental enrichment is an integral part of animal care practices Enrichment generally refers to items we provide to the animals to support their behavioral needs It provides a way to functionally simulate the natural environment of captive animals in an effort to increase opportunities for the expression of species specific behaviors and decrease the occurrence of abnormal behaviors Further enrichment can also be a tool in the study of basic science questions such as how environmental factors may affect disease etiology or progression In this chapter we will examine the use of enrichment in both applied and basic science contexts as a welfare tool and as an experimental model

Animal Models for the Study of Human Disease Charles W. Schindler, Steven R. Goldberg, 2013-05-29 Reward behavior represents a subset of conditioning procedures that have been developed by psychologists to study learning in animals In particular rewarded behavior involves an instrumental response that is maintained by a reinforcer The procedures that have been developed cover a broad spectrum of behaviors from simple running in a straight alley to very complex operant schedules of reinforcement that can require multiple responses over long periods of time Many species of animal have also been trained on these procedures Procedures have been developed to study the initial learning process as well as steady state behavior Procedures have also been developed to study memory As such rewarded behavior models can be used to study a wide variety of human diseases and conditions such as Alzheimer s disease

obesity drug abuse obsessive compulsive disorder and many others **Animals for Medical Research** Brij M. Mitruka, Howard M. Rawnsley, Dharam V. Vadehra, 1982 This text provides valuable information in selecting and using suitable animal species for research so that the experimental data can be meaningful and relevant to human disease It will be useful to those involved in experimental biology and medical research **Animal Models for the Study of Human Disease** Lucas M. Chaible, Denise Kinoshita, Marcus A. Finzi Corat, Maria L. Zaidan Dagli, 2013-05-29 Genetically modified animals were created about 30 years ago and are considered good models of human diseases In this chapter the types of genetically engineered mice such as transgenic knockout conditional knockout and knockin animals and the general techniques on how to obtain them are described In addition the available genetically modified models for genetic diseases multifactorial and polygenic complex disorders neurodegenerative inflammatory diseases besides cancer models are presented The aim of the chapter is to help investigators to find out the best models for their studies
