*The benefits listed under each brainwave state are general associations and it should not be assumed that all frequencies within the state's range will produce these benefits. There are specific frequencies associated with specific states, and indeed different results will be experienced in the high, middle, and low areas of each brainwave state.

HOW BINAURAL BEATS WORK

Upon hearing two tones of different frequencies, sent simultaneously to the left and right ears, the brain perceives a third tone based on the mathematical difference of the two frequencies. The brain then follows along at the new frequency and produces brainwaves at the same rate of Hertz (Hz). The technical term for this process is "frequency following response".
