The result is a widespread perception of a human error problem and solutions are thought to lie in changing the people or their role in the system. For example, we should reduce the human role with more automation or regiment human behavior by stricter monitoring rules or procedures. But in practice, things have proved not to be this simple. The label human error is prejudicial and hides much more than it reveals about how a system functions or malfunctions. This book takes you behind the human error label. Divided into five parts, it begins by summarising the most significant research results. Part 2 explores how systems thinking has radically changed our understanding of how accidents occur. Part 3 explains the role of cognitive system factors bringing knowledge to bear, changing mindset as situations and priorities change, and managing goal conflicts in operating safely at the sharp end of systems. Part 4 studies how the clumsy use of computer technology can increase the potential for erroneous actions and assessments in many different fields of practice. And Part 5 tells how the hindsight bias always enters into attributions of error so that what we label human error actually is the result of a social and psychological judgment process by stakeholders in the system in question to focus on only a facet of a set of interacting contributors. If you think you have a human error problem, recognize that the label itself is no explanation and no guide to countermeasures. The potential for constructive change for progress on safety lies behind the human error label.

Human Performance

Modeling in Aviation David C. Foyle, Becky L. Hooey, 2007-12-07 Based on the research activities of the six year NASA human performance modeling project, Human Performance Modeling in Aviation provides an in depth look at cognitive modeling of human operators for aviation problems. This book presents specific solutions to aviation safety problems and explores methods for integrating human performance modeling into the aviation design process. The text compares the application of five different models to two classes of aviation problems: pilot navigation errors during airport taxi operations and approach and landing performance with synthetic vision systems. This results in a comprehensive summary of the capabilities of each model and of the field in general. *Aviation Contaminated Air Reference Manual* Susan Michaelis, 2007 The Aviation Contaminated Air Reference Manual is the first ever fully referenced 800 page summary of the complete aircraft contaminated air issue in which crews and passengers have been exposed to oil and hydraulic fumes in aircraft cabins. The reference manual, which is the result of nearly ten years of research, is aimed at policy makers, doctors, scientists, air accident investigators, engineers, crews, passengers, airline and union representatives, politicians, and media involved or interested in any aspect of the contaminated air debate on commercial and military aircraft. *Madam President: 2024* Lem
