Debbabi,Fawzi Hassaïne,Yosr Jarraya,Andrei Soeanu,Luay Alawneh,2010-11-16 At the dawn of the 21st century and the information age communication and computing power are becoming ever increasingly available virtually pervading almost every aspect of modern socio economical interactions Consequently the potential for realizing a significantly greater number of technology mediated activities has emerged Indeed many of our modern activities are heavily dependant upon various underlying systems and software intensive platforms Such technologies are commonly used in everyday activities such as commuting traffic control and management mobile computing navigation mobile communication Thus the correct function of the forenamed computing systems becomes a major concern This is all the more important since in spite of the numerous updates patches and firmware revisions being constantly issued newly discovered logical bugs in a wide range of modern software platforms e.g operating systems and software intensive systems e.g embedded systems are just as frequently being reported In addition many of today's products and services are presently being deployed in a highly competitive environment wherein a product or service is succeeding in most of the cases thanks to its quality to price ratio for a given set of features Accordingly a number of critical aspects have to be considered such as the ability to pack as many features as needed in a given product or service while currently maintaining high quality reasonable price and short time to market **Nuclear Science Abstracts** ,1969-11 **Algoritmi adattivi per l'elaborazione dei segnali** Aurelio Uncini,2020-05-01 L'usabilità delle metodologie di elaborazione adattativa del segnale alla soluzione di problemi reali rappresenta un paradigma di

centrale importanza in molte applicazioni I metodi adattativi sono usati nelle scienze economico finanziarie ingegneristiche sociali in medicina in biologia e in molti altri settori di alto interesse strategico Il filtraggio adattativo rappresenta infatti un settore molto attivo di studio e ricerca e che per un approfondita comprensione richiede estese conoscenze interdisciplinari L obiettivo della presente opera di fornire strumenti teorici e pratici avanzati per lo studio e la determinazione di strutture circuitali e algoritmi robusti per l elaborazione adattativa di segnali nei vari contesti applicativi quali le comunicazioni multimediali e multimodali i settori biologico biomedico economico ambientale acustico le telecomunicazioni il telerilevamento il monitoraggio e in generale il modellamento e la predizione di fenomeni fisici complessi Il testo oltre a presentare i concetti teorici fondamentali di base introduce i pi importanti algoritmi adattativi fornendo al contempo anche strumenti per valutarne le prestazioni Anche se la struttura pedagogica dell opera risulta invariata la seconda edizione rinnovata sia nei contenuti sia nella veste grafica Particolare attenzione stata posta nelle tre appendici strutturate come veri e propri tutoriali con argomenti fondamentali e di facile e rapida consultazione L opera composta di nove capitoli ognuno dei quali riporta i riferimenti bibliografici Nella prima parte sono introdotti i concetti fondamentali del filtraggio ottimo lineare anche in presenza di vincoli lineari Successivamente sono presentate le tecniche elaborazione di blocco e ricorsive del primo e del secondo ordine sviluppate nel dominio del tempo e della frequenza La parte finale del testo interamente dedicata all elaborazione di segnali provenienti da schiere di sensori
