

The background of the cover is a blue-tinted photograph of four people, likely athletes, in a huddle. They are all looking down towards the center, with their heads and shoulders visible. The image is slightly out of focus, emphasizing the text in the foreground.

Applied Metacognition Applied Metacognition:

Applied Metacognition Timothy J. Perfect, Bennett L. Schwartz, 2002-11-14 There is a growing theoretical and practical interest in the topic of metacognition how we monitor and control our mental processes Applied Metacognition provides a coherent and up to date overview of the relation between theories in metacognition and their application in real world situations As well as a theoretical overview there are substantive chapters covering metacognition in three areas of application metacognition in education metacognition in everyday life memory and metacognition in different populations The book has contributions from many of the leading researchers in metacognition from around the world

Metacognition Janet Metcalfe, Arthur P. Shimamura, 1994-04-07 Metacognition offers an up to date compendium of major scientific issues involved in metacognition The twelve original contributions provide a concise statement of theoretical and empirical research on self reflective processes or knowing about what we know Self reflective processes are often thought to be central to what we mean by consciousness and the personal self Without such processes one would presumably respond to stimuli in an automatized and environmentally bound manner that is without the characteristic patterns of behavior and introspection that are manifested as plans strategies reflections self control self monitoring and intelligence A Bradford Book

Handbook of Applied Cognition Francis T. Durso, 2007-02-06 Written by a team of leading international researchers under the guidance of Frank Durso the second edition of the Handbook of Applied Cognition brings together the latest research into this challenging and important field and is presented across thirty stimulating and accessible chapters Stewarded by experienced editors from around the globe the handbook has been fully updated with eleven new chapters covering materials that focus on the topics critical to understanding human mental functions in complex environments It is an essential single source reference for researchers cognitive engineers and applied cognitive psychologists as well as advanced students in the flourishing field of applied cognition

Meta-cognition Michael F. Shaughnessy, Marcel Veenman, Cynthia Kleyn Kennedy, 2008 Over the past two decades the word metacognition has become a regularly used part of our language and vocabulary in both psychology and education Many research articles have been written about it the conceptualisation of this construct has expanded and conferences abound with investigations and empirical research into various facets of this domain This book provides some of the most recent research by scholars from various parts of the world It includes differing perspectives some empirical some theory driven and some application papers The book focuses on metacognition and its relevance to gifted and highly able students Many of the papers focus directly and specifically on this others are more tangential in nature

The Oxford Handbook of Reciprocal Adult Development and Learning Carol Hoare, 2011-09-06 One of the Best Books of 2011 from the Center for Optimal Adult Development The fields of adult development and the study of learning

have traditionally been considered separate with development falling under psychology and learning under education. However, recent ideas, research, and practices that have emerged in these fields of study effectively emphasize the inherent reciprocal relationship that exists between them: advances in development frequently lead to learning, and conversely, learning almost necessarily fuels development. In this second edition of *The Oxford Handbook of Reciprocal Adult Learning and Development*, the synchronicity between development and learning is explored further as expert authors advance the latest theories to provide a rich foundation for this new area of study and practice for this interrelated field of study. At the border of two disciplines, this handbook focuses on the capacities of intelligence, meta-cognition, insight, self-efficacy, spirituality, interpersonal competence, wisdom, and other key adult attributes as they relate to positive changes and personal growth in adults. Contexts for development and learning, e.g., the work role and environment, are also addressed and mixed in throughout the volume, are emanating implications for research, practice, and policy. What emerges is a thoughtful handbook for all who promote optimal aging and is a must-read for academics, psychologists, and practitioners in adult development.

The Taxonomy of Metacognition Pina Tarricone, 2011-02-28. Metacognition is a complex construct which is fundamental to learning. Its complex, fuzzy, and multifaceted nature has often led to its colloquial application in research, resulting in studies that fail to identify its theoretical foundation or elements. In response to this, the research community continues to call for a comprehensive understanding of the construct of metacognition. This book is a response to this call for clarity. Pina Tarricone provides a theoretical study of the construct of metacognition in terms of psychological theory. The first part of the book analyses the relationship between reflection and metacognition, and the second part goes on to analyse the construct of metamemory as the foundation of metacognition. The third and final part of the book analyses the construct of metacognition to present the final conceptual framework of metacognition and the taxonomy of metacognition. This framework builds a picture and a nexus of the construct through visual links to the related concepts that contribute to what is known as metacognition. *The Taxonomy of Metacognition* provides a comprehensive representation and categorisation of all of the terms, concepts, categories, supercategories, subcategories, and elements of metacognition. It clarifies the construct so that researchers and teachers can develop a better understanding of it. This important and broad-ranging contribution can be applied to many related areas by researchers, psychologists, teachers, and any profession interested in psychological learning processes.
