Leahy, David W. Hobill, 2008-02-21 Short period binaries run the gamut from widely separated stars to black hole pairs in
between are systems that include neutron stars and white dwarfs and partially evolved systems such as tidally distorted and
over contact systems These objects represent stages of evolution of binary stars and their degrees of separation provide
critical clues to how their evolutionary paths differ from that of single stars The widest and least distorted systems provide
astronomers with the essential precise data needed to study all stars mass and radius The interactions of binary star
components on the other hand provide a natural laboratory to observe how the matter in these stars behaves under different
and often varying physical conditions Thus cataclysmic variables with and without overpoweringly strong magnetic fields and
stars with densities from that found in the Sun to the degenerate matter of white dwarfs and the ultra compact states of
neutron stars and black holes are all discussed The extensive index permits cross referencing
