Technologies In Biophysical Sciences: A World Scientific Reference (In 3 Volumes) ,2022-10-14 Volume 1

Biofabrication aims to produce artificially manufactured tissues and organs potentially revolutionizing conventional paradigm of clinical practice in treating diseases and extending the life span and quality of human beings. In this volume we invite notable experts in the field of biofabrication and biomanufacturing to summarize recent rapid progress in this field from multifaceted aspects covering biofabrication techniques and building materials such as scaffold and living cells. Specifically a focus is placed on a variety of techniques derived from 3D bioprinting and bioassembly strategies such as acoustic assembly and electrofabrication. Moreover principles and strategies for choosing hydrogels and polymers for biofabrication are also heavily discussed. Overall this book creates a good opportunity for undergraduate and postgraduate students as well as bioengineers and medical researchers who wish to gain a fundamental understanding of current status and future trends in biofabrication and biomanufacturing. Volume 2 Infertility has become a significant psychosocial burden affecting the lives of couples who cannot reproduce naturally. Advanced reproductive technologies ARTs are being developed to treat infertility. This handbook explores significant development of ARTs for fertility testing, selection of sperm, oocyte and embryo, reproductive monitors, automation in embryology and fertility preservation. This volume provides a comprehensive overview of the myriad of emerging technologies and systems that are being utilized or will be utilized in near future in reproductive clinics. Overall this book creates a good opportunity for undergraduate and postgraduate students as well as scientists and medical researchers who wish to gain fundamental understanding of current status and future trends in fertility and reproductive medicine. Volume 3 Healthcare industry has a notable paradigm transition from centralized care to the point of care (POC). During this metamorphosis a number of new technologies and strategies have been adapted to the current practice addressing the existing challenges in the fields of medicine and biology. All the efforts aim to improve the clinical management and the effectiveness and quality of care. In particular diagnostics has pivotal roles in guiding clinical management for the most effective treatment to control and cure the disease. In contrast to the existing diagnostic strategies employing bulky sized tools, expensive infrastructure, laborious protocols and lengthy processing steps, the contribution of biosensors to current healthcare system especially to diagnostics is paramount. The unprecedented and admirable characteristics of biosensing strategies have expanded our knowledge on medicine and biology by harmonizing materials science, chemistry, physics and engineering. We believe that biosensors applied to disease diagnostics will not only garner

more attention in clinical research to decipher disease biology and mechanism and also stimulate innovative perspectives in artificial intelligence AI and internet of things IoT synergistically thereby their more facile adaptation to daily use Overall this book creates a good opportunity for undergraduate and postgraduate students as well as scientists and medical researchers who wish to gain fundamental understanding of current status and future trends in diagnostic technologies **Smart**

Probe Methods III Bharat Bhushan, Harald Fuchs, 2006-04-28 The Nobel Prize of 1986 on Scanning Tunneling Microscopy signaled a new era in imaging The scanning probes emerged as a new instrument for imaging with a precision sufficient to delineate single atoms At first there were two the Scanning Tunneling Microscope or STM and the Atomic Force Microscope or AFM The STM relies on electrons tunneling between tip and sample whereas the AFM depends on the force acting on the tip when it was placed near the sample These were quickly followed by the Genetic Force Microscope MFM and the Electrostatic Force Microscope EFM The MFM will image a single magnetic bit with features as small as 10nm With the EFM one can monitor the charge of a single electron Prof Paul Hansma at Santa Barbara opened the door even wider when he was able to image biological objects in aqueous environments At this point the sluice gates were opened and a multitude of different instruments appeared There are significant differences between the Scanning Probe Microscopes or SPM and others such as the Scanning Electron Microscope or SEM The probe microscopes do not require preparation of the sample and they operate in ambient atmosphere whereas the SEM must operate in a vacuum environment and the sample must be cross sectioned to

expose the proper surface However the SEM can record 3D image and movies features that are not available with the scanning probes
