Applied Mineralogy In The Mining Industry:

Applied Mineralogy in the Mining Industry W. Petruk, 2000-11-29 Techniques of performing applied mineralogy investigations and applications and capabilities of recently developed instruments for measuring mineral properties are explored in this book intended for practicing applied mineralogists students in mineralogy and metallurgy and mineral processing engineers The benefits of applied mineralogy are presented by using in depth applied mineralogy studies on base metal ores gold ores porphyry copper ores iron ores and industrial minerals as examples The chapter on base metal ores includes a discussion on the effects of liberation particle sizes and surfaces coatings of Pb Cu Fe Ca and SO_4 on the recoveries of sphalerite galena and chalcopyrite The chapter on gold discusses various methods of determining the quantities of gold in different minerals including invisible gold in pyrite and arsenopyrite so that a balance of the distribution of gold among the minerals can be calculated This book also discusses the roles of pyrite oxygen moisture and bacterial thiobacillus ferrooxidans on reactions that produce acidic drainage from tailings piles and summarizes currently used and proposed methods of remediation of acidic drainage Proceedings of the 10th International Congress for Applied Mineralogy (ICAM)

Applications of SEM Automated Mineralogy Bernhard Schulz,2021-04-09 During the last decade software developments in Scanning Electron Microscopy SEM provoked a notable increase of applications to the study of solid matter The mineral liberation analysis MLA of processed metal ores was an important drive for innovations that led to QEMSCAN MLA and other software platforms These combine the assessment of the backscattered electron BSE image to the directed steering of the electron beam for energy dispersive spectroscopy EDS to automated mineralogy However despite a wide distribution of SEM instruments in material research and industry the potential of SEM automated mineralogy is still under utilised The characterisation of primary ores and the optimisation of comminution flotation mineral concentration and metallurgical processes in the mining industry by generating quantified data is still the major application field of SEM automated mineralogy However there is interesting potential beyond these classical fields of geometallurgy and metal ore fingerprinting Slags pottery and artefacts can be studied in an archeological context for the recognition of provenance and trade pathways soil and solid particles of all kinds are objects in forensic science SEM automated mineralogy allows new insight in the fields of process chemistry and recycling technology
