ISFRAM 2015 Wardah Tahir, Sahol Hamid Abu Bakar, Marfiah Ab. Wahid, Siti Rashidah Mohd Nasir, Wei Koon Lee, 2016-04-09 This book focuses on international research in flood related areas and sustainable management It consists of a compilation of innovative works demonstrating best practices in flood management and recommend flood solutions The selected papers cover the fundamentals and latest advances in the area complete with illustrations diagrams and tables These proceedings serve as a source of information and state of the art technology in managing floods to improve quality of life **Response of Flood Events to Land Use and Climate Change** Azadeh Ramesh, 2012-11-06 This book is an original and novel contribution to flood hazard assessment climate change and land use change and is intended to serve both as an effective source of information and a valuable basis for priority setting and further technical financial and political decisions regarding flood hazard assessment The study area is located on the floodplain of the Ubaye River in the Barcelonnette area part of the Alpes de Haute Provence in southeast France The book offers a comparative overview of the major challenges faced when dealing with flood hazards The research presented is intended to promote a deeper understanding of how climate change and land use change processes have evolved from past to present and how they affect the flow regime of the Ubaye River based on sound and reproducible scientific arguments The methodology implemented ranges from remote sensing interpretation to hydrodynamic modeling and includes the application of spatial and statistical modeling The results of this research provide essential information for policymaking decision making support and flood hazard planning in the Barcelonnette area *Geographic Information Systems in Water Resources Engineering* Lynn E. Johnson, 2016-04-19 State of the art GIS spatial data management and analysis tools are revolutionizing the field of water resource engineering Familiarity with these technologies is now a prerequisite for success in engineers and planners efforts to create a reliable infrastructure GIS in Water Resource Engineering presents a review of the concepts and application **Handbook of Engineering Hydrology** Saeid Eslamian, 2014-03-21 While most books examine only the classical aspects of hydrology this three volume set covers multiple aspects of hydrology It examines new approaches addresses growing concerns about hydrological and ecological connectivity and considers the worldwide impact of climate change It also provides updated material on hydrological science and engine **A handbook on flood hazard mapping methodologies** Andrés Díez

Herrero, Luis Laín Huerta, Miguel Llorente Isidro, 2009 *Innovative Trends in Hydrological and Environmental Systems* Anil Kumar Dikshit, Balaji Narasimhan, Bimlesh Kumar, Ajey Kumar Patel, 2022-05-13 This book presents select proceedings of the International Virtual Conference on Trends in Hydrological and Environmental Systems ITHES 2021 Various topics covered in this book include urban hydrology hydrological extremes statistical analysis of hydro meteorological data impacts of climate change hydrological modelling groundwater studies water resource management and applications of RS GIS in hydrology The book also discusses various topics on applications of CFD in water resources and environmental engineering water and wastewater treatment solid waste management and air quality The book will be a valuable reference for beginners researchers and professionals interested in environmental civil engineering especially hydrological and environmental systems

Groundwater Assessment and Modelling C. P. Kumar, 2023-03-30 Groundwater development has shown phenomenal progress in our country during past few decades There has been a vast improvement in the perception outlook and significance of groundwater resource Groundwater is a dynamic system It is dynamic in the sense that the state of any hydrological system is changing with time and in the sense that we are continually developing new scientific techniques to evaluate these systems The total annual replenishable groundwater resource of India is around 431 BCM In spite of the national scenario on the availability of groundwater being favourable there are many areas in the country facing scarcity of water This is because of the unplanned groundwater development resulting in fall of water levels failure of wells and salinity ingress in coastal areas The development and over exploitation of groundwater resources in certain parts of the country have raised the concern and need for judicious and scientific resource management and conservation A complexity of factors hydrogeological hydrological and climatological control the groundwater occurrence and movement The precise assessment of recharge and discharge is rather difficult as no techniques are currently available for their direct measurements Hence the methods employed for groundwater resource estimation are all indirect Groundwater being a dynamic and replenishable resource is generally estimated based on the component of annual recharge which could be subjected to development by means of suitable groundwater structures Mathematical models are tools which are frequently used in studying groundwater systems In general mathematical models are used to simulate or to predict the groundwater flow Predictive simulations must be viewed as estimates dependent upon the quality and uncertainty of the input data Model conceptualization is the process in which data describing field conditions are assembled in a systematic way to describe groundwater flow processes at a site The model conceptualization aids in determining the modelling approach and which model software to use Taking the base from my lecture notes delivered in various training courses during last 26 years and further editing and additions I have developed this book titled *Groundwater Assessment and Modelling* The book is intended to provide a comprehensive treatise related to assessment and modelling of groundwater It includes chapters on assessment of groundwater potential groundwater data requirement and analysis basic concepts and guidelines for groundwater modelling groundwater modelling

software modelling of unsaturated flow modelling of sea water intrusion and impact of climate change on groundwater resources I hope this book will be quite useful for undergraduate and postgraduate students water resources engineering field engineers and researchers working in the area of assessment development and management of groundwater resources

Handbook of Engineering Hydrology (Three-Volume Set) Saeid Eslamian, 2018-10-03 While most books examine only the classical aspects of hydrology this three volume set covers multiple aspects of hydrology and includes contributions from experts from more than 30 countries It examines new approaches addresses growing concerns about hydrological and ecological connectivity and considers the worldwide impact of climate change
