galois cohomology wikipedia - Aug 14 2023

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of
homological algebra to modules for galois groups a galois group g associated to a field extension l/k acts in a natural way on
some abelian groups for example those constructed directly from l but also through other galois representations that may be
derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
