Abutment Design Example to BD 30

Design the fixed and free end cantilever abutments to the 20m span deck shown to carry HA and 45 units of HB loading. Analyse the abutments using a unit strip method. The bridge site is located south east of Oxford (to establish the range of shade air temperatures).

The ground investigation report shows suitable founding strata about 9.5m below the proposed road level. Test results show the founding strata to be a cohesionless soil having an angle of shearing resistance (ϕ) = 30° and a safe bearing capacity of 400kN/m^2 .

Backfill material will be Class 6N with an effective angle of internal friction (ϕ') = 35° and density (γ) = 19kN/m^3 .
