Deen, 2015-09-02 *Geographical Knowledge Construction and Production* Teacher and Student Perspectives is a readable and illuminating account of three high school classrooms in suburban Atlanta Georgia It challenges the narrow focus of the Advanced Placement AP programme as a tool for admission into colleges and universities in the United States The research provides insight into the College Board s AP programme and argues for teaching and learning that is transformative and geared toward equipping students with the skills and knowledge necessary to confront the challenges of the 21st century In particular it advocates for geographic education that is anchored in the structure of the subject teasing wherever possible the contradictions and tensions embedded in the complexities of facts relating to people and places This book is essential reading for professors and students of education teachers and students of AP courses parents administrators and state and federal agencies vested in the AP programme

Forces of Nature Barry A. Vann, 2012-03-20 As long as the human species has existed men and women have had to contend with the unpredictable forces of nature Geographer Barry A Vann brings a unique perspective to this age old struggle in this illuminating overview of human population shifts and their precarious relationship with climate change and geography Vann takes us on a journey along the migration routes of the earliest modern humans and tells why our ancestors chose to settle down in places that can be best described as natural utopias In the religiously oriented worldview of ancient peoples such places took on a sacred aura of divine favor Similarly destructive events such as volcanic eruptions and earthquakes were interpreted as expressions of divine wrath Vann shows how the ancient texts of the Bible and the Qur an offer glimpses of past climates that were distinctly different from the climate of our time He also discusses the rise of technology as a means of controlling the threatening features of the natural world Though technology has enabled humanity to cope with hostile climates it has also created a false sense of security Vann notes that population clusters are increasing in dangerous areas and that no technology can protect vulnerable groups from major category hurricanes tornadoes or earthquakes Finally he considers our current anxieties regarding global warming pointing out that this focus has obscured a good deal of historical and geological evidence for a return of another ice age The Forces of Nature offers a challenging perspective on the precarious balance between fragile human communities and their often threatening environments

Sexuality , *Scarce Goods* Tom Koch,2001-11-30 In 1841 the American sailing ship William Brown struck an iceberg About half of the passengers and all of the crew were saved in two small open boats The next night half of the passengers in the larger long boat were thrown overboard because the boat was overfull This was the first case of lifeboat ethics of hard choices in the face of scarcity Since then the question has been who should die so that others equally needy might live Both the case of the William Brown and the ethics it spawned have been used in recent years to describe the problem of health care rationing generally and organ transplantation specifically Koch reexamines and reinterpretes the paradigm case of lifeboat ethics the story of the William Brown not as an unavoidable tragedy but as an avoidable series of errors Its relation to more general issues of distributive justice are then considered The lessons learned from both the historical review and its application to distributive principles are then applied to the problem of graft organ distribution in the United States Through the use of maps the problem of organ distribution is considered at a range of scales from the international to the urban The contextual issues become more evident as one moves from international to hemispheric from national to regional and then local systems Finally Koch reviews the lessons in light of other problems of distribution in the face of scarcity The central lesson that scarcity is exacerbated where it is not in fact created by our distributive programs is explored thoroughly The result is no good choices for anyone and the continuation of the scarcity that for most seems inevitable but from the evidence provided is itself an outcome of inequalities of distribution at different scales of society Of particular interest to students scholars and policymakers involved with issues of planning and health care economics medical geography and concepts of justice *ASMOSIA 5* Association for the Study of Marble and Other Stones used in Antiquity.
