Bible and Ethics in the Christian Life Bruce C. Birch, Jacqueline E. Lapsley, Cynthia D. Moe-Lobeda, Larry L. Rasmussen, 2018-05-01 Earth is changing in ways it hasn't for hundreds of thousands of years At the same time Christianity is breaking away from its millennium long geographical and cultural center in the Euro West Its growth is in Asia Africa and Latin America primarily in Pentecostal evangelical and independent churches These dramatically changed planetary and ecclesial landscapes have led many to conclude that we need a new way of thinking about our collective existence who are we and what is the nature of our responsibility in this deeply altered world To address that question biblical scholars Bruce C Birch and Jacqueline E Lapsley and Christian ethicists Larry L Rasmussen and Cynthia Moe Lobeda carry on a new conversation that engages how Christians are to understand the authority and use of Scripture the basic elements of any full bodied Christian ethic attuned to our circumstances and the nature of our responsibility to our planetary neighbors and creation itself

Learner-Centered Teaching Activities for Environmental and Sustainability Studies Loren B. Byrne, 2016-03-21 Learner centered teaching is a pedagogical approach that emphasizes the roles of students as participants in and drivers of their own learning Learner centered teaching activities go beyond traditional lecturing by helping students construct their own understanding of information develop skills via hands on engagement and encourage personal reflection

through metacognitive tasks In addition learner centered classroom approaches may challenge students preconceived notions and expand their thinking by confronting them with thought provoking statements tasks or scenarios that cause them to pay closer attention and cognitively see a topic from new perspectives Many types of pedagogy fall under the umbrella of learner centered teaching including laboratory work group discussions service and project based learning and student led research among others Unfortunately it is often not possible to use some of these valuable methods in all course situations given constraints of money space instructor expertise class meeting and instructor preparation time and the availability of prepared lesson plans and material Thus a major challenge for many instructors is how to integrate learner centered activities widely into their courses The broad goal of this volume is to help advance environmental education practices that help increase students environmental literacy Having a diverse collection of learner centered teaching activities is especially useful for helping students develop their environmental literacy because such approaches can help them connect more personally with the material thus increasing the chances for altering the affective and behavioral dimensions of their environmental literacy This volume differentiates itself from others by providing a unique and diverse collection of classroom activities that can help students develop their knowledge skills and personal views about many contemporary environmental and sustainability issues

Ecocollapse Fiction and Cultures of Human Extinction Sarah E. McFarland, 2021-01-28 This work analyzes 21st century realistic speculations of human extinction fictions that imagine future worlds without interventions of as yet uninvented technology interplanetary travel or other science fiction elements that provide hope for rescue or long term survival Climate change fiction as a genre of apocalyptic and post apocalyptic writing usually resists facing the potentiality of human species extinction following instead traditional generic conventions that imagine primitivist communities of human survivors with the means of escaping the consequences of global climate change Yet amidst the ongoing sixth great extinction works that problematize survival provide no opportunities for social rebirth and speculate humanity s final end may address the problem of how to reject the impulse of human exceptionalism that pervades climate change discourse and post apocalyptic fiction Rather than following the preferences of the genre the ecocollapse fictions examined here manifest apocalypse where the means for a happy ending no longer exists In these texts diminished ecosystems specters of cannibalism and disintegrations of difference and othering render human self identity as radically malleable within their confrontations with the stark materiality of all life This book is the first in depth exploration of contemporary fictions that imagine the imbrication of human and nonhuman within global species extinctions It closely interrogates novels from authors like Peter Heller Cormac McCarthy and Yann Martel that reject the impulse of human exceptionalism to demonstrate what it might be like to go extinct

Global Heating and the Australian Far Right Imogen Richards, Gearóid Brinn, Callum Jones, 2023-12-01 *Global Heating and the Australian Far Right* examines the environmental politics of far right actors and movements in Australia exploring their broader political context and responses

to climate change The book traces the development of far right pseudo environmentalism and territorial politics from colonial genocide and Australian nationalism to extreme right political violence Through a critical analysis of news and social media it reveals how denialist and resignatory attitudes towards climate change operate alongside extreme right accelerationism in a wider Australian political context characterised by reactionary fossil fuel politics and neoliberal New Right climate change agendas The authors scrutinise the manipulation of environmental politics by contemporary Australian far and extreme right actors in cross national online media They also assess the political ideological context of the contemporary far right addressing intergovernmental approaches to security threats connected to the far right and climate change and the emergence of radical environmentalist traditions in New Catastrophism literature The conclusion synthesises key insights analysing the mainstreaming of ethnonationalist and authoritarian responses to global heating and potential future trajectories of far right movements exploiting the climate crisis It also emphasises the necessity for radical political alternatives to counter the far right s exploitation of climate change This book will be of interest to researchers of climate change the far right neoliberal capitalism extremism and Australian politics

The Climate Nexus Robert William Sandford, Jon O'Riordan, 2015 Secure supplies of water food and energy are essential to human dignity and well being around the globe Their vitality is dependent on healthy ecosystems supporting thriving biodiversity All four elements are inter related in that actions to govern one will automatically affect the others known as the Nexus Global demand for the first three elements is increasing due to population growth and rising per capital incomes in developing countries with steadily worsening results for the fourth The Nexus elements are also subject to increasing pressures from climate disruption in the form of more frequent and severe flooding droughts storms pest outbreaks and extreme heat Nature s capacity to moderate these impacts is also being eroded by rapid widespread land use development and associated pollution The combination of increasing demand decreasing supplies and rapidly changing hydro climatic conditions at all points of the Nexus requires transformative policy responses that encompass economy equity social justice fairness and the environment The Climate Nexus outlines these challenges and offers a pathway to resolving them

The Subjugation of Canadian Wildlife Max Foran, 2018-04-10 Hardly a day goes by without news of the extinction or endangerment of yet another animal species followed by urgent but largely unheeded calls for action An eloquent denunciation of the failures of Canada s government and society to protect wildlife from human exploitation Max Foran s *The Subjugation of Canadian Wildlife* argues that a root cause of wildlife depletions and habitat loss is the culturally ingrained beliefs that underpin management practices and policies Tracing the evolution of the highly contestable assumptions that define the human wildlife relationship Foran stresses the price wild animals pay for human self interest Using several examples of government oversight at the federal provincial and territorial levels from the Species at Risk Act to the Biodiversity Strategy Protected Areas Network and provincial management plans this volume shows that wildlife policies are as much or more about human needs priorities and

profit as they are about preservation Challenging established concepts including ecological integrity adaptive management sport hunting as conservation and the flawed belief that wildlife is a renewable resource the author compels us to recognize animals as sentient individuals and as integral components of complex ecological systems A passionate critique of contemporary wildlife policy **The Subjugation of Canadian Wildlife** calls for belief change as the best hope for an ecologically healthy wildlife rich Canada

The Ice at the End of the World Jon Gertner, 2019-06-11 A riveting urgent account of the explorers and scientists racing to understand the rapidly melting ice sheet in Greenland a dramatic harbinger of climate change Jon Gertner takes readers to spots few journalists or even explorers have visited The result is a gripping and important book Elizabeth Kolbert Pulitzer Prize winning author of *The Sixth Extinction* NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Washington Post The Christian Science Monitor Library Journal Greenland a remote mysterious island five times the size of California but with a population of just 56 000 The ice sheet that covers it is 700 miles wide and 1 500 miles long and is composed of nearly three quadrillion tons of ice For the last 150 years explorers and scientists have sought to understand Greenland at first hoping that it would serve as a gateway to the North Pole and later coming to realize that it contained essential information about our climate Locked within this vast and frozen white desert are some of the most profound secrets about our planet and its future Greenland s ice doesn t just tell us where we ve been More urgently it tells us where we re headed In *The Ice at the End of the World* Jon Gertner explains how Greenland has evolved from one of earth s last frontiers to its largest scientific laboratory The history of Greenland s ice begins with the explorers who arrived here at the turn of the twentieth century first on foot then on skis then

on crude motorized sleds and embarked on grueling expeditions that took as long as a year and often ended in frostbitten tragedy Their original goal was simple to conquer Greenland's seemingly infinite interior Yet their efforts eventually gave way to scientists who built lonely encampments out on the ice and began drilling one mile two miles down Their aim was to pull up ice cores that could reveal the deepest mysteries of earth's past going back hundreds of thousands of years Today scientists from all over the world are deploying every technological tool available to uncover the secrets of this frozen island before it's too late As Greenland's ice melts and runs off into the sea it not only threatens to affect hundreds of millions of people who live in coastal areas It will also have drastic effects on ocean currents weather systems economies and migration patterns Gertner chronicles the unfathomable hardships amazing discoveries and scientific achievements of the Arctic's explorers and researchers with a transporting deeply intelligent style and a keen sense of what this work means for the rest of us The melting ice sheet in Greenland is in a way an analog for time It contains the past It reflects the present It can also tell us how much time we might have left
