Apogee Programming Guide:

The Informatics Handbook S.A. Fist, 2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical artifact of 1950s computer science

Different Engines Andrés Burbano, 2023-03-31 Different Engines investigates the emergence of technologies in Latin America to

create images sounds video games and physical interactions The book contributes to the construction of a historiographical and theoretical framework for understanding the work of creators who have been geographically and historically marginalized through the study of five exemplary and yet relatively unknown artifacts built by engineers scientists artists and innovators It offers a broad and detailed view of the complex and sometimes unlikely conditions under which technological innovation is possible and of the problematic logics under which these innovations may come to be devalued as historically irrelevant Through its focus on media technologies the book presents the interactions between technological and artistic creativity working towards a wider understanding of the shifts in both fields that have shaped current perceptions practices and design principles while bringing into view the personal social and geopolitical singularities embodied by particular devices It will be an engaging and insightful read for scholars researchers and students across a wide range of disciplines such as media studies art and design architecture cultural history and the digital humanities
