Bayesian Cost-Effectiveness Analysis of Medical Treatments Elias Moreno, Francisco Jose Vazquez-Polo, Miguel Angel Negrín-Hernández, 2019-01-30 Cost effectiveness analysis is becoming an increasingly important tool for decision making in the health systems Cost Effectiveness of Medical Treatments formulates the cost effectiveness analysis as a statistical decision problem identifies the sources of uncertainty of the problem and gives an overview of the frequentist and Bayesian statistical approaches for decision making Basic notions on decision theory such as space of decisions space of nature utility function of a decision and optimal decisions are explained in detail using easy to read mathematics Features Focuses on cost effectiveness analysis as a statistical decision problem and applies the well established optimal statistical decision methodology Discusses utility functions for cost effectiveness analysis Enlarges the class of models typically used in cost effectiveness analysis with the incorporation of linear models to account for covariates of the patients This permits the formulation of the group or subgroup theory Provides Bayesian procedures to account for model uncertainty in variable selection for linear models and in clustering for models for heterogeneous data Model uncertainty in cost effectiveness analysis has not been considered in the literature Illustrates examples with real data In order to facilitate the practical implementation of real datasets provides the codes in Mathematica for the proposed methodology The motivation for the book is to make the achievements in cost effectiveness analysis accessible to health providers who need to make optimal decisions to the practitioners and to the students of health sciences El as Moreno is Professor of Statistics and Operational Research at the University of Granada Spain Corresponding Member

of the Royal Academy of Sciences of Spain and elect member of ISI Francisco Jos V zquez Polo is Professor of Mathematics and Bayesian Methods at the University of Las Palmas de Gran Canaria and Head of the Department of Quantitative Methods Miguel ngel Negr n is Senior Lecturer in the Department of Quantitative Methods at the ULPGC His main research topics are Bayesian methods applied to Health Economics economic evaluation and cost effectiveness analysis meta analysis and equity in the provision of healthcare services

Statistical Topics in Health Economics and Outcomes Research Demissie Alemayehu, Joseph C. Cappelleri, Birol Emir, Kelly H. Zou, 2017-11-22 With ever rising healthcare costs evidence generation through Health Economics and Outcomes Research HEOR plays an increasingly important role in decision making about the allocation of resources Accordingly it is now customary for health technology assessment and reimbursement agencies to request for HEOR evidence in addition to data from clinical trials to inform decisions about patient access to new treatment options While there is a great deal of literature on HEOR there is a need for a volume that presents a coherent and unified review of the major issues that arise in application especially from a statistical perspective Statistical Topics in Health Economics and Outcomes Research fulfils that need by presenting an overview of the key analytical issues and best practice Special attention is paid to key assumptions and other salient features of statistical methods customarily used in the area and appropriate and relatively comprehensive references are made to emerging trends The content of the book is purposefully designed to be accessible to readers with basic quantitative backgrounds while providing an in depth coverage of relatively complex statistical issues The book will make a very useful reference for researchers in the pharmaceutical industry academia and research institutions involved with HEOR studies The targeted readers may include statisticians data scientists epidemiologists outcomes researchers health economists and healthcare policy and decision makers

Statistical Methods for Healthcare Performance Monitoring Alex Bottle, Paul Aylin, 2016-08-05 Healthcare is important to everyone yet large variations in its quality have been well documented both between and within many countries With demand and expenditure rising it s more crucial than ever to know how well the healthcare system and all its components from staff member to regional network are performing This requires data which inevitably differ in form and quality It also requires statistical methods the output of which needs to be presented so that it can be understood by whoever needs it to make decisions Statistical Methods for Healthcare Performance Monitoring covers measuring quality types of data risk adjustment defining good and bad performance statistical monitoring presenting the results to different audiences and evaluating the monitoring system itself Using examples from around the world it brings all the issues and perspectives together in a largely non technical way for clinicians managers and methodologists Statistical
