Blind Speech Separation Signals And Communication Technology:

Blind Speech Separation Shoji Makino, Te-Won Lee, Hiroshi Sawada, 2007-09-07 We are surrounded by sounds. Such a noisy environment makes it difficult to obtain desired speech and it is difficult to converse comfortably there. This makes it important to be able to separate and extract a target speech signal from noisy observations for both man-machine and human-human communication. Blind source separation (BSS) is an approach for estimating source signals using only information about their mixtures observed in each input channel. The estimation is performed without possessing information on each source such as its frequency characteristics and location or on how the sources are mixed. The use of BSS in the development of comfortable acoustic communication channels between humans and machines is widely accepted. Some books have been published on BSS, independent component analysis (ICA) and related subjects. There, ICA-based BSS has been well studied in the statistics and information theory fields for applications to a variety of disciplines including wireless communication and biomedicine. However, as speech and audio signal mixtures in a real reverberant environment are generally convolutive mixtures, they involve a structurally much more challenging task than instantaneous mixtures, which are prevalent in many other applications.

Blind Source Separation Ganesh R. Naik, Wenwu Wang, 2014-05-21 Blind Source Separation intends to report the new results of the efforts on the study of Blind Source Separation (BSS). The book collects novel research ideas and some training in BSS, independent component analysis (ICA), artificial intelligence and signal processing applications. Furthermore, the research results previously scattered in many journals and conferences worldwide are methodically edited and presented in a unified form. The book is likely to be of interest to university researchers. R. Dr. Wenwu Wang works at University of Surrey, UK.

Latent Variable Analysis and Signal Separation Fabian Theis, Andrzej Cichocki, Arie Yeredor, Michael Zibulevsky, 2012-03-01 This book constitutes the proceedings of the 10th International Conference on Latent Variable Analysis and Signal Separation (LVA/ICA 2012) held in Tel Aviv, Israel, in March 2012. The 20 revised full papers presented together with 42 revised poster papers, 1 keynote lecture and 2 overview papers for the regular as well as for the special session were carefully reviewed and selected from numerous submissions. Topics addressed are ranging from theoretical issues such as causality analysis and measures through novel methods for employing the well-established concepts of sparsity and non-negativity for matrix and tensor factorization down to a variety of related applications ranging from audio and biomedical signals to precipitation analysis.

Latent Variable Analysis and Signal Separation Yannick Deville, Sharon Gannot, Russell Mason, Mark D. Plumbley, Dominic Ward, 2018-06-05 This book constitutes the proceedings of the 14th International Conference on Latent Variable Analysis and Signal Separation (LVA/ICA 2018) held in Guildford, UK, in July 2018. The 52 full papers were carefully reviewed and selected from 62 initial submissions. As research topics, the papers encompass a wide range of general mixtures of latent variables models but also theories and tools drawn from a great variety of disciplines such as structured tensor decompositions and applications, matrix and tensor factorizations, ICA methods.
