Artificial Intelligence Frontiers In Statistics AI And Statistics Iii:

Artificial Intelligence Frontiers in Statistics D. J. Hand, 2013-08-22 **Artificial Intelligence Frontiers in Statistics** David J. Hand, 2020-11-26 This book presents a summary of recent work on the interface between artificial intelligence and statistics It does this through a series of papers by different authors working in different areas of this interface These papers are a selected and referenced subset of papers presented at the 3rd International Workshop on Artificial Intelligence and Statistics Florida January 1991 **Artificial Intelligence Frontiers in Statistics** David J. Hand, 2020-11-25 This book presents a summary of recent work on the interface between artificial intelligence and statistics It does this through a series of papers by different authors working in different areas of this interface These papers are a selected and referenced subset of papers presented at the 3rd International Workshop on Artificial Intelligence and Statistics Florida January 1991 **Advances in Intelligent Data Analysis** David J Hand, Joost N. Kok, Michael R. Berthold, 2003-05-21 This book constitutes the refereed proceedings of the Third International Symposium on Intelligent Data Analysis IDA 99 held in Amsterdam The Netherlands in August 1999 The 21 revised full papers and 23 posters presented in the book were carefully reviewed and selected from a total of more than 100 submissions The papers address all current aspects of intelligent data analysis they are organized in sections on learning visualization classification and clustering integration applications and media mining Learning from Data Doug Fisher, Hans-J. Lenz, 2012-12-06 Ten years ago Bill Gale of AT T Bell Laboratories was primary organizer of the first Workshop on Artificial Intelligence and Statistics In the early days of the Workshop series it seemed clear that researchers in AI and statistics had common interests though with different emphases goals and vocabularies In learning and model selection for example a historical goal of AI to build autonomous agents probably contributed to a focus on parameter free learning systems which relied little on an external analyst s assumptions about the data This seemed at odds with statistical strategy which stemmed from a view that model selection methods were tools to augment not replace the abilities of a human analyst Thus statisticians have traditionally spent considerably more time exploiting prior information of the environment to model data and exploratory data analysis methods tailored to their assumptions In statistics special emphasis is placed on model checking making extensive use of residual analysis because all models are wrong but some are better than others It is increasingly recognized that AI researchers and or AI programs can exploit the same kind of statistical strategies to good effect Often AI researchers and statisticians emphasized different aspects of what in retrospect we might now regard as the same overriding tasks Artificial Intelligence in Economics and Management Phillip Ein-Dor, 2012-12-06 In the past decades several researchers have developed statistical models for the prediction of corporate bankruptcy e g Altman 1968 and Bilderbeek 1983 A model for predicting corporate bankruptcy aims to describe the relation between bankruptcy and a number of explanatory financial ratios These ratios can be calculated from the information contained in a company s annual report The is to obtain a method

for timely prediction of bankruptcy a so ultimate purpose called early warning system More recently this subject has attracted the attention of researchers in the area of machine learning e g Shaw and Gentry 1990 Fletcher and Goss 1993 and Tam and Kiang 1992 This research is usually directed at the comparison of machine learning methods such as induction of classification trees and neural networks with the standard statistical methods of linear discriminant analysis and logistic regression In earlier research Feelders et al 1994 performed a similar comparative analysis The methods used were linear discriminant analysis decision trees and neural networks We used a data set which contained 139 annual reports of Dutch industrial and trading companies The experiments showed that the estimated prediction error of both the decision tree and neural network were below the estimated error of the linear discriminant Thus it seems that we can gain by replacing the traditionally used linear discriminant by a more flexible classification method to predict corporate bankruptcy The data set used in these experiments was very small however

Selecting Models from Data P. Cheeseman, R.W. Oldford, 2012-12-06 This volume is a selection of papers presented at the Fourth International Workshop on Artificial Intelligence and Statistics held in January 1993 These biennial workshops have succeeded in bringing together researchers from Artificial Intelligence and from Statistics to discuss problems of mutual interest The exchange has broadened research in both fields and has strongly encouraged interdisciplinary work The theme of the 1993 AI and Statistics workshop was Selecting Models from Data The papers in this volume attest to the diversity of approaches to model selection and to the ubiquity of the problem Both statistics and artificial intelligence have independently developed approaches to model selection and the corresponding algorithms to implement them But as these papers make clear there is a high degree of overlap between the different approaches In particular there is agreement that the fundamental problem is the avoidance of overfitting i.e. where a model fits the given data very closely but is a poor predictor for new data in other words the model has partly fitted the noise in the original data

Advances in Computational Intelligence Systems Fei Chao, Steven Schockaert, Qingfu Zhang, 2017-09-04 The book is a timely report on advanced methods and applications of computational intelligence systems It covers a long list of interconnected research areas such as fuzzy systems neural networks evolutionary computation evolving systems and machine learning The individual chapters are based on peer reviewed contributions presented at the 17th Annual UK Workshop on Computational Intelligence held on September 6-8 2017 in Cardiff UK The book puts a special emphasis on novel methods and reports on their use in a wide range of application areas thus providing both academics and professionals with a comprehensive and timely overview of new trends in computational intelligence

Learning in Graphical Models Michael Irwin Jordan, 1999 Presents an exploration of issues related to learning within the graphical model formalism This text covers topics such as inference for Bayesian networks Monte Carlo methods variational methods and learning with Bayesian networks

Current Index to Statistics, Applications, Methods and Theory, 1995 The Current Index to Statistics CIS is a bibliographic index of publications in statistics probability and related fields
