Gaseous Electronics and Gas Lasers Blake E. Cherrington, 2014-06-20 *Gaseous Electronics and Gas Lasers* deals with the fundamental principles and methods of analysis of weakly ionized gas discharges and gas lasers. The emphasis is on processes occurring in gas discharges and the analytical methods used to calculate important process rates. Detailed analyses of a variety of gas discharges are presented using atomic ionic and gas lasers as primary illustrations. Comprised of 12 chapters, this book begins with some initial categorization of gas discharge species and an overview of their interactions. The discussion then turns to an elementary theory of a gas discharge, inelastic collisions, distribution functions, and the Boltzmann equation and transport coefficients. Subsequent chapters focus on the fluid equations, electron density decay processes, excited species, atomic neutral gas lasers, molecular gas lasers, and ion lasers. The important electron loss processes that determine the behavior of a plasma when the source and loss terms balance are also examined. This monograph will be of value to graduate students, practitioners, and researchers in the fields of physics and engineering, as well as to professionals interested in working with weakly ionized discharges. *Electronic Engineering*, 1984.

Xavier Gandibleux, 2006-04-11 The generalized area of multiple criteria decision making MCDM can be defined as the body of methods and procedures by which the concern for multiple conflicting criteria can be formally incorporated into the analytical process MCDM consists mostly of two branches multiple criteria optimization and multi criteria decision analysis MCDA While MCDA is typically concerned with multiple criteria problems that have a small number of alternatives often in an environment of uncertainty location of an airport type of drug rehabilitation program multiple criteria optimization is typically directed at problems formulated within a mathematical programming framework but with a stack of objectives instead of just one river basin management engineering component design product distribution It is about the most modern treatment of multiple criteria optimization that this book is concerned I look at this book as a nicely organized and well rounded presentation of what I view as new wave topics in multiple criteria optimization Looking back to the origins of MCDM most people agree that it was not until about the early 1970s that multiple criteria optimization coalesced as a field At this time and for about the following fifteen years the focus was on theories of multiple objective linear programming that subsume conventional single criterion linear programming algorithms for characterizing the efficient set theoretical vector maximum developments and interactive procedures Accounting Paul D.
