A Theory Of Argument A Theory Of Argument:

A Theory of Argument Mark Vorobej, 2006-03-06 A Theory of Argument is an advanced textbook intended for students in philosophy communications studies and linguistics who have completed at least one course in argumentation theory information logic critical thinking or formal logic Containing nearly 400 exercises Mark Vorobej develops a novel approach to argument interpretation and evaluation One of the key themes of the book is that we cannot succeed in distinguishing good argument from bad arguments until we learn to listen carefully to others Part I develops a relativistic account of argument cogency that allows for rational disagreement Part II offers a comprehensive and rigorous account of argument diagramming Hybrid arguments are contrasted with linked and convergent arguments and a novel technique is introduced for graphically recording disagreements with authorial claims

Crucial Concepts in Argumentation Theory F. H. van Eemeren, 2001 Crucial Concepts in Argumentation Theory is a collection of essays that discuss a series of important issues in the study of argumentation The essays describe the concepts that are crucial to argumentational research and the various ways these concepts have been approached The essays explore such issues as points of view unexpressed premises argument schemes argumentation structures fallacies argument interpretation and reconstruction and argumentation in law Each of the essays provides interested readers with an overview of the literature that can serve as a point of departure for further study

Prolegomenon to a Theory of Argument Structure Ken Hale, Samuel Jay Keyser, 2002-10-11 This work is the culmination of an eighteen year collaboration between Ken Hale and Samuel Jay Keyser on the study of the syntax of lexical items It examines the hypothesis that the behavior of lexical items may be explained in terms of a very small number of very simple principles In particular a lexical item is assumed to project a syntactic configuration defined over just two relations complement and specifier where these configurations are constrained to preclude iteration and to permit only binary branching The work examines this hypothesis by methodically looking at a variety of constructions in English and other languages

A Theory of Argumentation Charles Arthur Willard, 2003-07-03 Establishes a theoretical context for and to elaborate the implications of the claim that argument is a form of interaction in which two or more people maintain what they construe to be incompatible positions The thesis of this book is that argument is not a kind of logic but a kind of communication conversation based on disagreement Claims about the epistemic and political effects of argument get their authority not from logic but from their fit with the facts about how communication works A Theory of Communication thus offers a picture of communication distilled from elements of symbolic interactionism personal construct theory constructivism and Barbara O Keefe's provocative thinking about logics of message design The picture of argument that emerges from this tapestry is startling for it forces revisions in thinking about knowledge rationality freedom fallacies and the structure and content of the argumentation discipline

Groundwork in the Theory of Argumentation J. Anthony Blair, 2011-10-20 J Anthony Blair is a prominent international figure in argumentation studies He is among the originators of

informal logic an author of textbooks on the informal logic approach to argument analysis and evaluation and on critical thinking and a founder and editor of the journal *Informal Logic* Blair is widely recognized among the leaders in the field for contributing formative ideas to the argumentation literature of the last few decades This selection of key works provides insights into the history of the field of argumentation theory and various related disciplines It illuminates the central debates and presents core ideas in four main areas Critical Thinking Informal Logic Argument Theory and Logic Dialectic and Rhetoric

Topical Themes in Argumentation Theory Frans H. van Eemeren, Bart Garssen, 2012-05-05 *Topical Themes in Argumentation Theory* brings together twenty exploratory studies on important subjects of research in contemporary argumentation theory The essays are based on papers that were presented at the 7th Conference of the International Society for the Study of Argumentation ISSA in Amsterdam in June 2010 They give an impression of the nature and the variety of the kind of research that has recently been carried out in the study of argumentation The volume starts with three essays that provide stimulating theoretical perspectives on argumentation Subsequently some views are explained on the intriguing topics of dissensus and deep disagreement After a discussion of three different approaches to the treatment of types of argumentation some classical themes from antique argumentation theory are revisited The new research area of visual argumentation is explored in the next part The volume concludes with three reports of experimental studies concerning argumentative discourse The volume starts with three essays that provide stimulating theoretical perspectives on argumentation Subsequently some views are explained on the intriguing topics of dissensus and deep disagreement After a discussion of three different approaches to the treatment of types of argumentation some classical themes from antique argumentation theory are revisited The new research area of visual argumentation is explored in the next part The volume concludes with three reports of experimental studies concerning argumentative discourse

A Theory of Argument Mark Vorobej, 2006 Mark Vorobej develops a novel approach to argument interpretation and evaluation that synthesizes subjective concerns about the personal points of view of individual arguers with objective concerns about the structural properties of arguments *A Theory of Argument* is an advanced textbook intended for students in philosophy communication studies and linguistics

Dialog Theory for Critical Argumentation Douglas N. Walton, 2007-09-19 Because of the need to devise systems for electronic communication on the internet multi agent computing is moving to a model of communication as a structured conversation between rational agents For example in multi agent systems an electronic agent searches around the internet and collects certain kinds of

information by asking questions to other agents Such agents also reason with each other when they engage in negotiation and persuasion It is shown in this book that critical argumentation is best represented in this framework by the model of reasoned argument called a dialog in which two or more parties engage in a polite and orderly exchange with each other according to rules governed by conversation policies In such dialog argumentation the two parties reason together by taking turns asking questions offering replies and offering reasons to support a claim They try to settle their disagreements by an orderly conversational exchange that is partly adversarial and partly collaborative *Recovering Argument* Randall Lake, 2018-10-29 This volume presents the best scholarship from the 19th National Communication Association American Forensic Association Conference on Argumentation which took place July 30 August 2 2015 at Cliff Lodge Snowbird Resort in Alta Utah The Alta Conference first held in 1979 is the oldest conference in argumentation studies in the world and biennially brings together a lively group of scholars representing a variety of countries with diverse perspectives on the theory and practice of argument The essays in *Recovering Argument* invite reflection upon and reconsideration of argumentation's legacy present status and potential roles in social cultural and political life Readers will encounter essays that treat the relationship between argumentation and memory historical approaches to argumentation the vitality of public and interpersonal argument argument's role in leadership discursive and presentational forms of argument and the challenges of difference Readers also will find these topics addressed from a variety of historical social scientific and critical interpretive perspectives Manifest Rationality Ralph H. Johnson, 2012-11-12 This book works through some of the theoretical issues that have been accumulating in informal logic over the past 20 years At the same time it defines a core position in the theory of argument in which those issues can be further explored The underlying concern that motivates this work is the health of practice of argumentation as an important cultural artifact A further concern is for logic as a discipline Argumentative and dialectical in nature this book presupposes some awareness of the theory of argument in recent history and some familiarity with the positions that have been advanced It will be of interest to academics researchers and advanced undergraduate and graduate students in the disciplines of logic rhetoric linguistics speech communication English composition and psychology

Adopting the Song of Phrase: An Emotional Symphony within **A Theory Of Argument A Theory Of Argument**
