incremental investment in new equipment which reduces the number of high speed inter office trunks required to interconnect the switches The analysis requires optimizing the mix of two types of customer port cards to determine the maximum customer port capacity of a switch Simple approximations are used to estimate the number of inter office trunks and trunk cards required Based in large part on the costs computed by this model an executive level decision was made to move to the new architecture Key Words data communications network architecture network design frame relay virtual circuits economic analysis 1 Introduction To design a data communications network it is necessary to consider a variety of factors **Catalog of Copyright Entries.
