Notebook On Structural Biology Techniques: Study Guide For Practitioners Ipsita Banerjee, 2025-05-29 This book describes the basic techniques required in learning structural biology Apart from the classical and standard approaches like X ray crystallography and SAXS small angle X ray scattering it has quite an extensive chapter on the most recent approach namely cryo Electron Microscopy The material is partly pedagogical allowing readers to learn the subject including some advanced topics The application of these techniques to a specific example Ribonucleotide Reductase is discussed At the end there is a detailed Mathematical Supplement broken into six sections that develop from basic principles the various mathematical machinery needed to learn the techniques of structural biology It elaborates on the key mathematical concepts mentioned in the various chapters Additionally there is a

collection of Ipsita's papers highlighting her seminal contributions especially in the data processing of cryo EM **Best practice guidelines for the rehabilitation and translocation of gibbons** International Union for the Conservation of Nature and Natural Resources (IUCN), Clare O. Campbell, Susan M. Cheyne, Benjamin M. Rawson, 2015-05-28 Rehabilitation and translocation programmes are increasingly becoming an important component of conservation action plans for threatened species Translocation can help address gibbon conservation issues gibbons are recognized as one of the most threatened primate families globally by allowing gibbons held in captivity to be rescued rehabilitated and then returned to the wild These guidelines for the translocation of gibbons have been developed in collaboration with stakeholders in hylobatid conservation This process was initiated during a workshop on gibbon rehabilitation reintroduction and translocation facilitated by the IUCN SSC PSG Section on Small Apes SSA and the result of this process is the current document which is based on shared knowledge and experience to date The guidelines are designed to be a practical and useful document available for all stakeholders with the aim of equipping field projects and decision makers with the tools for scientifically sound practice in gibbon rehabilitation and translocation Biobanking of Human Biospecimens Pierre Hainaut, Jim Vaught, Kurt Zatloukal, Markus Pasterk, 2021-08-25 Over the past 25 years biobanks of human specimens have become a cornerstone for research on human health and have empowered the omics revolution that characterizes biomedical science in the XXIst Century Today biobanking of human specimens is a critical component of the interface between clinical practice and translational research supporting the discovery and validation of new biomarkers of disease etiology risk early detection diagnosis prognosis prediction and relapse With the development of personalized medicine biobanking of cryopreserved specimens has become standard practice in order to investigate genetic transcriptomic proteomic metabolomics and immunological biomarkers useful to inform caregivers for therapeutic decisions Data generated from biobanked specimens represent a rapidly growing and highly valuable resource participating in the emergence of Big Data Medicine With the development of large computing capabilities and artificial intelligence data associated with biobanked specimens constitute a unique resource for the discovery and validation of new biomarkers and therapeutically actionable targets Interconnecting interoperating and sharing this data have become major issues for national health systems raising enormous stakes as well as major societal legal and cybersecurity challenges in terms of compliance with the protection of personal sensitive information This book project is the second part of an initiative launched in 2012 to produce a published corpus of knowledge encompassing all aspects of human biobanking as a central practice for research and medicine The first volume published in 2017 is entitled Human Biobanking Principles and Practice This first volume compiled a series of high level contributions overseeing the main developments that carried the progression of human biobanking as a research and biotechnological field over the past two decades This new book project will constitute de facto Volume 2 of the same initiative under the title Biobanking of Human Biospecimens lessons from 25 years of biobanking experience Hence the two volumes

will share the same generic title Biobanking of Human Biospecimens with different subtitles making clear that the two volumes are interrelated while highlighting their specificities in terms of what they actually cover As a result the two books are twins but can also be used independently of each other The overarching aim of the two volumes of Biobanking of Human Biospecimens is to provide a published one stop shop for state of the art information on what constitutes the field of human biobanking from conception of a biobank standard operating procedures ethical and societal aspects governance networking interoperability and economic sustainability This inclusive publication concept meets the needs of a vast readership including scientists doctors and technical staffs who are directly involved in biobanking operations scientists in other disciplines that heavily rely on biobanking such as genomics or proteomics stakeholders and policy makers and of course students for whom biobanking is becoming an important part of the training curriculum So far there has been a lack of major textbooks on biobanking Documentation for biobanking is widely available through numerous publications regulatory documents published by International or Governmental Agencies and sets of recommendations essentially accessible through the Internet However it is difficult to access a single top of the shelf reference that provides at a glance a large coverage of all aspects of human biobanking Fulfilling this need is the main origin of the concept for this back to back publication project To our knowledge there is currently no other publication project with the same breath and scope as this one in the field of biobanking
