Hormones P.J.J. Hooykaas, M.A. Hall, K.R. Libbenga, 1999-05-13 This book provides up to date coverage at an advanced level of a range of topics in the biochemistry and molecular biology of plant hormones with particular emphasis on biosynthesis metabolism and mechanisms of action Each contribution is written by acknowledged experts in the field providing definitive coverage of the field No other modern book covers this subject matter at such an advanced level so comprehensively It will be invaluable to university libraries and scientists in the plant biotechnology industries *Biochemistry and Molecular Biology of Plants* Danni Gilmore, 2019-04-19 Membrane structures are spatial structures made out of tensioned membranes The structural use of membranes can be divided into pneumatic structures tensile membrane structures and cable domes In these three kinds of structure membranes work together with cables columns and other construction members to find a form Peripheral membrane proteins are found on the outside and inside surfaces of membranes attached either to integral proteins or to phospholipids Unlike integral membrane proteins peripheral membrane proteins do not stick into the hydrophobic core of the membrane and they tend to be more loosely attached Cells are the smallest units of life They are a closed system can self replicate and are the building blocks of our bodies In order to understand how these tiny organisms work we will look at a cell's internal structures We will focus on eukaryotic cells cells that contain a nucleus Prokaryotic cells cells that lack a nucleus are structured differently The cell membrane is an extremely pliable structure composed primarily of back to back phospholipids a bilayer Cholesterol is also present which contributes to the fluidity of the membrane and there are various proteins embedded within the membrane that have a variety of functions Today the DNA double helix is probably the most iconic of all biological molecules It's inspired staircases decorations pedestrian bridges and more A vesicular transport protein or vesicular transporter is a membrane protein that regulates or facilitates the movement of specific molecules across a vesicle's membrane As a result vesicular transporters govern the concentration of molecules within a vesicle Plants require higher amounts of nitrogen as it is important in their structure and metabolism Nearly 80 per cent of the earth's atmosphere is composed of nitrogen bathing the entire plant world but unfortunately most plants cannot utilize it in its elementary form The book is a meticulously organized and richly illustrated work useful both for teaching and for reference It is intended to serve plant biology and related disciplines ranging from molecular biology and biotechnology to biochemistry cell biology physiology and ecology Researchers in the pharmaceutical biotechnology and agribusiness industries will find a wealth of information inside **Plant Biochemistry and Molecular Biology** Hans-Walter Heldt, 1997
