Dynamics of Degeneration and Growth in Neurons is a collection of papers presented at the International Symposium on the Dynamics of Degeneration and Growth in Neurons held in Stockholm Sweden on May 16 18 1973 Contributors explore the dynamics of degeneration and growth of central and peripheral neurons touching on a wide range of topics such as the neurotoxic action of 6 hydroxy dopa on central catecholamine neurons axonal transport of proteins in growing and regenerating neurons and collateral reinnervation in the central nervous system Comprised of 50 chapters this volume begins with an overview of degeneration processes in central and peripheral neurons Results of microfluorimetric and neurochemical studies on degenerating and regenerating adrenergic nerves are presented The next section is devoted to axoplasmic transport as a mechanism for axonal support and growth and includes chapters dealing with the effects of degeneration and axoplasmic transport blockade on synaptic ultrastructure function and protein composition the role of axoplasmic flow in trophism of skeletal muscle and proximodistal transport of acetylcholine in peripheral cholinergic neurons The remaining chapters discuss the nerve growth factor receptor and its specific binding in sympathetic ganglia the noradrenergic innervation of cerebellar Purkinje cells and the possible role of brain and peripheral monoamines in the ontogenesis of normal and drug induced responses in the immature mammal This book will be of interest to physiologists and neurologists

Advances in Cellular Neurobiology Volume 5 focuses on cellular neurobiology drawing on some aspects of biochemistry endocrinology embryology morphology genetics pharmacology pathology and physiology This book deals with humoral influences on brain development Organized into three sections encompassing 10 chapters this volume begins with an overview of the proposed functions for neurohumoral agents including cell division neural tube closure palate formation myoblast differentiation and regulation of cell movements This text then examines how growth factors regulate autonomic nerve development Other chapters consider the morphology physiology and biochemistry of the neuronal cytoskeleton This book discusses as well the connective tissue components in the normal peripheral nervous system and in two pathological conditions The final chapter deals with the advantages and preparation of monoclonal antibodies in the identification of neurons This book is a valuable resource for neurobiologists and researchers Scientists in all fields of life sciences will also find this book useful

International Migraine-Headache Symposium F. Sicuteri, 1972-03-14 **Receptors in the Nervous System** Abel Lajtha, 2013-06-29

A major advance in the biological sciences in the past decade has been the biochemical identification of cell membrane receptors The existence of receptor substances on the surface of cells that recognize and bind to extracellular molecules was proposed at the beginning of the

century by the pharmacologist and immunologist Paul Ehrlich and the physiologist J N Langley Since then receptors have been found to play an important role in numerous physiological and pathological processes Over the years many attempts have been made to physically isolate and chemically characterize receptors but because of the receptors extremely low concentration and membrane localization these efforts have met with limited success Yet despite the failure to characterize receptor substances the concept of the presence of such molecules has had considerable heuristic value Using pharmacological physiological and immunologic approaches researchers have identified several specific receptors e g α and adrenergic nicotinic and muscarinic cholinergic and histaminergic With the characterization of various types of receptors on cell membranes many drugs were developed that proved to be experimentally and therapeutically useful It was only in the early 1970s that methods for the specific measurement chemical characterization and physical isolation of cell membrane receptors were developed These advances were made possible by the availability of ligands with high specific radioactivity that retained their biological activity and of experimental procedures that differentiated between specific and non specific binding of ligands
