Bioinformatics Biocomputing and Perl Michael Moorhouse, Paul Barry, 2004 Bioinformatics Biocomputing and Perl presents a modern introduction to bioinformatics computing skills and practice Structuring its presentation around four main areas of study this book covers the skills vital to the day to day activities of today's bioinformatician Each chapter contains a series of maxims designed to highlight key points and there are exercises to supplement and cement the introduced material Working with Perl presents an extended tutorial introduction to programming through Perl the premier programming technology of the bioinformatics community Even though no previous programming experience is assumed completing the tutorial equips the reader with the ability to produce powerful custom programs with ease Working with Data applies the programming skills acquired to processing a variety of bioinformatics data In addition to advice on working with important data stores such as the Protein DataBank SWISS PROT EMBL and the GenBank considerable discussion is devoted to using bioinformatics data to populate relational database systems The popular MySQL database is used in all examples Working with the Web presents a discussion of the Web based technologies that allow the bioinformatics researcher to publish both data and applications on the Internet Working with Applications shifts gear from creating custom programs to using them The tools described include Clustal W EMBOSS STRIDE BLAST and Xmgrace An introduction to the important Bioperl Project concludes this chapter and rounds off the book

Literature Search Strategies for Interdisciplinary Research Linda G. Ackerson, 2007 The amount of published literature can be overwhelming for scientists and researchers moving from a broad disciplinary research area to a more specialized one particularly in fields that use information from more than one discipline Without a focused inquiry the researcher may find too little information or may be overcome by too much Striking the correct balance of information is the focus of *Literature Search Strategies for Interdisciplinary Research* This useful reference tool studies diverse interdisciplinary areas revealing the general and individual qualities that dictate the strategies of successful searches Beginning with a bare bones search strategy for finding primary research in interdisciplinary areas the book then goes on to provide hints for research in specific disciplines as the unique traits of the individual fields compound the difficulties in interdisciplinary research Individual chapters written by experts in that particular area address ten research fields in depth disclosing the common qualities of interdisciplinary research The study areas covered include Paleontology Crystallography Quaternary Research Human

Factors Engineering Nanotechnology Atmospheric Chemistry Bioethics Computational Biology Engineering Entrepreneurship and Machine Learning For scientists and engineers new to their fields as well as librarians whose responsibilities include collecting library materials for newly emerging interdisciplinary research areas Linda Ackerson's guide provides all that is needed to develop a successful search strategy
