

Relative and Absolute Ages of Rocks Quiz Study Guide

relative dating- used in geology to determine the comparative age of rocks by examining the position of the rock layers. i.e. top layers are younger than bottom layers, bottom layers are older than top layers, etc.

relative age- a rock's age compared to the ages of other rocks (**not** an exact age)

absolute age- the number of years since the rock formed; sometimes geologists can determine the absolute age of the rock within a certain number of years.

law of superposition- states that for undisturbed rock layers, the oldest rocks are on bottom and become younger and younger toward the top.

extrusion- lava that hardens on the earth's surface; always younger than the rocks below it

intrusion- magma that cools and hardens in a mass of igneous rock below the earth's surface; always younger than the rock layers around and beneath it

unconformity

unconformity- gaps in rock layers; a place where new rock layers meet much older rock surface beneath them

fault- a break in the earth's crust

index fossil- used to help geologists tell the relative ages of the rock layers in which they occur

- 3 criteria:
- lived on earth for short period of time
 - widespread geographically (everywhere)
 - abundant (a lot of them)

		System	Relative (approx) age	
PALEOZOIC "Insects life"	Age of amphibians and early plants	Permian/Triassic		
		Carboniferous		
	Age of fishes	Devonian		
		Silurian		
	Age of vertebrates	Ordovician

Absolute Age Determination Mebus A. Geyh, Helmut Schleicher, 2012-12-06 With the growing recognition during the last two centuries that the Earth has an immense age and processes over long periods of time have changed the morphology and composition of the Earth's crust geologists have become increasingly interested in determination of absolute ages A relative geochronology was established on the basis of the lithostratigraphic and biostratigraphic principles developed during the last century With the discovery of radioactivity the basis for a new geoscientific discipline geochronology was established Rutherford 1906 It is the study of geological time based mainly on the time signatures provided by the isotopic composition in geologic materials The isotopic signature in a rock yields more information than that provided by the geochemical signature alone because it reflects the origin and history of the element in the rock The aim of geochronology is to calibrate and standardize chronostratigraphic scales to develop geological time scales that have a sensitive or at least useful resolution in order to place the geological events in the correct chronological order and to assign their proper time spans In practice the application of geochronology is much wider because the data in the natural archives often provide information on the origin genesis and history of the materials This of course requires an understanding of the geochemical behavior of the substances involved

The Physical Principles of Rock Magnetism Frank Stacey, 2012-12-02 Developments in Solid Earth Geophysics 5 The Physical Principles of Rock Magnetism explores the physical principles of rock magnetism with emphasis on the properties of finely divided magnetic materials It discusses the origin and stability of rock magnetizations the role of remanent magnetism in interpreting magnetic surveys magnetic anisotropy as an indicator of rock fabric and the relationship between piezomagnetic changes and seismic activity Organized into 13 chapters this volume discusses the properties of solids magnetite and hematite grains and rocks with magnetite grains It also explains various theories and equations in studying rock magnetism Different types of magnetization are discussed including their occurrence significance and effects Some of the types include depositional and chemical remanent and thermoremanent magnetization In addition this book explains the thermal activation and Piezomagnetic effects as well as the reversals of remanent magnetism This reference contains appendices with tables of relevant functions such as Langevin Function This book is a valuable source of information for physicists and geologists
