Advanced Mathematical Economics Rakesh V. Vohra, 2005 This textbook presents students with all they need for advancing in mathematical economics Higher level undergraduates as well as postgraduate students in mathematical economics will find this book extremely useful **Advanced Mathematical Methods for Economic Efficiency Analysis** Pedro Macedo, Victor Moutinho, Mara Madaleno, 2023-06-21 Economic efficiency analysis has received considerable worldwide attention in the last few decades with Stochastic Frontier Analysis SFA and Data Envelopment Analysis DEA establishing themselves as the two dominant approaches in the literature This book by combining cutting edge theoretical research on DEA and SFA with attractive real world applications offers a valuable asset for professors students researchers and professionals working in all branches of economic efficiency analysis as well as those concerned with the corresponding economic policies The book is divided into three parts the first of which is devoted to basic concepts making the content self contained The second is devoted to DEA and the third to SFA The topics covered in Part 2 range from stochastic DEA to multidirectional dynamic inefficiency analysis including directional distance functions the elimination and choice translating algorithm benefit of the doubt composite indicators and internal benchmarking for efficiency evaluations Part 3 also includes exciting and cutting edge theoretical research on e g robustness nonparametric stochastic frontier models hierarchical panel data models and estimation methods like corrected ordinary least squares and maximum entropy **Advanced Math for Economics** Peter Lambert, 1985 This book contains a compact accessible treatment of the main mathematical topics encountered in economics at an advanced level moving from basic material into the twin areas of static and dynamic optimization Nearly half of the book is devoted to a survey of univariate calculus matrix algebra and multivariate calculus This fundamental material is made vigorous by the inclusion of a variety of applications The later chapters focus on the Lagrange multiplier technique when it will work why it works and what economic insights it yields The properties of maximum value functions and duality are explored as are the Hamiltonian conditions for dynamic problems in the optimal control format Dynamic programming and the calculus of variations are also covered Much of the discussion proceeds at a heuristic level and by worked example but the theorems and proofs required by the most analytical user are also to be found The underlying message is that the language of mathematics can be productive giving expression to the ideas and facilitating approaches from which insights flow that may be hard to come by in other ways The book will be particularly useful for final year undergraduates doing mathematics for economists courses and postgraduate students **Advanced Mathematical Methods** Francesco Mainardi, Andrea Giusti, 2020-02-05 The many technical and computational problems that appear to be

constantly emerging in various branches of physics and engineering beg for a more detailed understanding of the fundamental mathematics that serves as the cornerstone of our way of understanding natural phenomena The purpose of this Special Issue was to establish a brief collection of carefully selected articles authored by promising young scientists and the world's leading experts in pure and applied mathematics highlighting the state of the art of the various research lines focusing on the study of analytical and numerical mathematical methods for pure and applied sciences *Advanced Mathematical Methods In Environmental And Resource Economics* Anastasios Xepapadeas,2022-09-20 The most interesting issues in environmental and resource economics have an explicit temporal dimension since variables of interest such as pollutants greenhouse gases biomass of biological resources or the stocks of fossil fuels accumulate in the ambient environment or are depleted through human actions and natural processes The purpose of these lectures is to present the mathematical tools for analyzing environmental and resource management issues in a dynamic set up The lectures include a brief description of differential equations and then move on to describe methods of optimal control dynamic programming and differential games The final chapters cover two novel topics 1 environmental issues characterized by deep uncertainty and aversion to ambiguity using robust control methods and formulations of precautionary policies and 2 the study of pollution resource management in space and time when the environmental variables evolve in time and diffuse in space The lectures are a valuable tool for advanced graduate students in environmental and resource economics who are studying dynamic problems **Advanced Mathematical Methods** Adam Ostaszewski,1990 This text is a self contained second course on mathematical methods dealing with topics in linear algebra and multivariate calculus that can be applied to statistics

Advanced Econometric Theory John Chipman,2013-03-01 When learning econometrics what better way than to be taught by one of its masters In this significant new volume John Chipman the eminence grise of econometrics presents his classic lectures in econometric theory Starting with the linear regression model least squares Gauss Markov theory and the first principals of econometrics this book guides the introductory student to an advanced stage of ability The text covers multicollinearity and reduced rank estimation the treatment of linear restrictions and minimax estimation Also included are chapters on the autocorrelation of residuals and simultaneous equation estimation By the end of the text students will have a solid grounding in econometrics Despite the frequent complexity of the subject matter Chipman's clear explanations concise prose and sharp analysis make this book stand out from others in the field With mathematical rigor sharpened by a lifetime of econometric analysis this significant volume is sure to become a seminal and indispensable text in this area *Karl Marx's Economics* John Cunningham Wood,2004-11
