IUTAM Symposium on Microstructure-Property Interactions in Composite Materials R. Pyrz, 2012-12-06 The IUTAM Symposium on Microstructure Property Interactions in Composite Materials was held during the dates 22nd to 25th August 1994 in Rebild Bakker Conference Centre situated in the heart of one of Denmark s most beautiful natural areas Participation in the Symposium was reserved for invited participants suggested by members of the Scientific Committee The cooperation with the Scientific Committee is highly appreciated The Symposium brought together 76 researchers from 15 countries representing a broad range of backgrounds relevant to the topic of the meeting The participants represented the disciplines of materials science and engineering applied mechanics applied mathematics and scientific computations The Symposium comprehensively addressed the analytical numerical and experimental methods that provide an estimation of the overall effective properties from microstructural data The 41 contributions emphasized the significance of the microstructure morphology in understanding the nature and origin of a multitude of properties such as viscoelasticity plasticity strength and fracture for a variety of polymer metal and ceramic based composite materials Specifically the Symposium examined and reviewed the current state of the art of

micromechanical modelling experimental investigations and morphological qu tification of composite materials microstructure The volume contains 35 papers published in an alphabetic order after the name of the first author Much to regret of the Scientific Committee some manuscripts were not submitted The financial support of the IUT AM the Obels Family Foundation and the Institute of Mechanical Engineering Aalborg University is gratefully acknowledged *IUTAM Symposium on Synthesis in Bio Solid Mechanics* Pauli Pedersen, Martin P. Bendsøe, 2006-04-11 This book contains the edited version of invited lectures presented at the IUTAM Sym sium Synthesis in Bio Solid Mechanics held at Hotel Frederiksdal Virum Copenhagen Denmark May 24 to May 27 1998 The symposium was attended by 48 scientist from 14 countries Biomechanics has been a very active research area in the last 25 years and covers a very broad class of problems The present symposium concentrated on the solid mechanics main of biomechanics where important problems of synthesis presently are an active and challenging part Characteristics of biomechanical materials are not only the inhomogeneity and anisotropy but also the capability to change in relation to actual use These living materials call for new methods of analysis and also new methods for synthesis By the synthesis in this context is meant design of implants or artificial control of material growth Bone mechanics is closely related to recent work on analysis and design of microstructural anisotropic materials Also recent work in shape design can to some extent be useful in the more complicated problems of biomechanics Here interface problems play an essential role The symposium brought together scientists from mechanics mathematics and medicine
