The Art of High

Performance Computing for Computational Science, Vol. 2 Masaaki Geshi, 2019-10-01 This book presents advanced and practical techniques for performance optimization for highly parallel processing. Featuring various parallelization techniques in material science, it is a valuable resource for anyone developing software codes for computational sciences such as physics, chemistry, biology, earth sciences, space science, weather, disaster prevention, and manufacturing, as well as for anyone using those software codes. Chapter 1 outlines supercomputers and includes a brief explanation of the history of hardware. Chapter 2 presents procedures for performance evaluation, while Chapter 3 describes the set of tuned applications in materials science, nanoscience, and nanotechnology. Chapter 4 introduces the order N method based on density functional theory (DFT) calculation. Chapter 5 explains how to extend the applicability of DFT to large scale systems by reducing the computational complexity. Chapter 6 discusses acceleration and parallelization in classical molecular dynamics simulations, and lastly Chapter 7 explains techniques for large scale quantum chemical calculations including the order N method. This is the second of the two volumes that grew out of a series of lectures in the K computer project in Japan. The first volume addresses more basic techniques, and this second volume focuses on advanced and concrete techniques.

Innovations and Advanced Techniques in Computer and Information Sciences and Engineering Tarek Sobh, 2007-09-04 Innovations and Advanced Techniques in Computer and Information Sciences and Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science, Computer Engineering, and Information Sciences. Innovations and Advanced Techniques in Computer and Information Sciences and Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering (SCSS 2006) which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering (CISSE 2006). All aspects of the conference were managed on line, not only the reviewing, submissions, and registration processes, but also the actual conference. Conference participants, authors, presenters, and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference. The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions, live without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 70 countries, for whose researchers this opportunity presented a much more affordable, dynamic, and well planned event to attend and submit their work to, versus a classic on the ground conference. The CISSE conference audio room provided superb audio, even over low speed internet connections, the ability to display PowerPoint presentations, and cross platform compatibility. The conferencing software runs on Windows, Mac, and any other operating system that supports Java. In addition, the conferencing system allowed for an unlimited number of participants, which in turn granted CISSE the opportunity to allow all participants to
