Optical Technologies in Biophysics and Medicine, 2006 Advances in

Biophotonics Brian Wilson, Valerii Viktorovich Tuchin, S. Tanev, 2005-01-01 The field of biophotonics is rapidly emerging in both academia and industry It is the convergence of photonics and life sciences Photonics the science and technology of light generation manipulation and measurement has itself seen a remarkable expansion in the past 20 years both in research and in commercialization particularly in telecommunications The life sciences have an increasing need for new technologies to which photonics can make significant contributions As biology and medicine move into the post genomics era it is increasingly important to have highly sensitive tools for probing cells tissues and whole organism structure and functions Through photonic technologies optical fibers and sensitive imaging detectors these measurements can often be done in a non or minimally invasive way which is tremendously valuable for clinical and remote sensing applications In clinical medicine the ability to probe and image tissues is leading to a wide range of novel diagnostic methods examples of these techniques are given in this book Finally the new field of nanotechnology is now penetrating into biophotonics Examples include the use of nanoparticles such as metal nanospheres or rods and quantum dots for enhanced cell and tissue imaging and local light energy absorption As will be evident this volume is not intended as a comprehensive text on biophotonics Rather it presents snapshots of some of the most exciting developments from a perspective of photonic technologies and life sciences applications
