Decision Making, Planning, and Control Strategies for Intelligent Vehicles Haotian Cao, Mingjun Li, Song Zhao, Xiaolin Song, 2020-07-28 The intelligent vehicle will play a crucial and essential role in the development of the future intelligent transportation system which is developing toward the connected driving environment ultimate driving safety and comforts as well as green efficiency While the decision making planning and control are extremely vital components of the intelligent vehicle these modules act as a bridge connecting the subsystem of the environmental perception and the bottom level control execution of the vehicle as well This short book covers various strategies of designing the decision making trajectory planning and tracking control as well as share driving of the human automation to adapt to different levels of the automated driving system More specifically we introduce an end to end decision making module based on the deep Q learning and improved path planning methods based on artificial potentials and elastic bands which are designed for obstacle avoidance Then the optimal method based on the convex optimization and the natural cubic spline is presented As for the speed planning planning methods based on the multi object optimization and high order polynomials and a method with convex

optimization and natural cubic splines are proposed for the non vehicle following scenario e.g free driving lane change obstacle avoidance while the planning method based on vehicle following kinematics and the model predictive control MPC is adopted for the car following scenario We introduce two robust tracking methods for the trajectory following The first one based on nonlinear vehicle longitudinal or path preview dynamic systems utilizes the adaptive sliding mode control SMC law which can compensate for uncertainties to follow the speed or path profiles The second one is based on the five degrees of freedom nonlinear vehicle dynamical system that utilizes the linearized time varying MPC to track the speed and path profile simultaneously Toward human automation cooperative driving systems we introduce two control strategies to address the control authority and conflict management problems between the human driver and the automated driving systems Driving safety field and game theory are utilized to propose a game based strategy which is used to deal with path conflicts during obstacle avoidance Driver's driving intention situation assessment and performance index are employed for the development of the fuzzy based strategy Multiple case studies and demos are included in each chapter to show the effectiveness of the proposed approach We sincerely hope the contents of this short book provide certain theoretical guidance and technical supports for the development of intelligent vehicle technology

Intelligent Vehicle Systems Raj Madhavan, Elena R. Messina, 2006 This book presents new research on autonomous mobility capabilities and shows how technological advances can be anticipated in the coming two decades An in depth description is presented on the theoretical foundations and engineering approaches that enable these capabilities Chapter 1 provides a brief introduction to the 4D RCS reference model architecture and design methodology that has proven successful in guiding the development of autonomous mobility systems Chapters 2 to 7 provide more detailed descriptions of research that has been conducted and algorithms that have been developed to implement the various aspects of the 4D RCS reference model architecture and design methodology Chapters 8 and 9 discuss applications performance measures and standards Chapter 10 provides a history of Army and DARPA research in autonomous ground mobility Chapter 11 provides a perspective on the potential future developments in autonomous mobility

Handbook of Intelligent Vehicles Azim Eskandarian, 2012-02-26 The Handbook of Intelligent Vehicles provides a complete coverage of the fundamentals new technologies and sub areas essential to the development of intelligent vehicles it also includes advances made to date challenges and future trends Significant strides in the field have been made to date however so far there has been no single book or volume which captures these advances in a comprehensive format addressing all essential components and subspecialties of intelligent vehicles as this book does Since the intended users are engineering practitioners as well as researchers and graduate students the book chapters do not only cover fundamentals methods and algorithms but also include how software hardware are implemented and demonstrate the advances along with their present challenges Research at both component and systems levels are required to advance the functionality of intelligent vehicles This volume covers both of these aspects in addition to the fundamentals listed above
